Page: Uber for Laundry App, Laundry App Clone , On-demand Laundry App

Create your own Uber for Laundry App with impressive pickup & delivery options to maximize the sales value of on-demand laundry services and transform it into an accessible one.

Let's Move Forward With Your Project

Uber for Laundry is the customizable app script that has the systematic framework to meet all the trends evolved in the on-demand sectors. Backed up with the impressive design modules and the adaptive features, we provide you the advanced Uber for Laundry App to make the laundry services as easily accessible by all stage customers. In parallel, the laundry service providers have benefitted with huge size of customers and high-productivity.

Our on demand laundry app acts as a customer-friendly app that allows them to save a lot of time. With the inclusion of the imperative designs and the advanced features, It allows the laundry service providers to complete their work on-time. By incorporating the features related to the trends and customer preferences, our on demand laundry app creates revolutions in the on-demand laundry services. The metrics to meet the trends in modern laundry services are listed as follows:

Centralized monitoring platform

Customizable as per the needs

Ready-to-use platform to receive more orders

Scalable to create a marketplace

Build up of less-ownership model

Limitless service expansion options

Platform compatibility

User-friendly interfaces with impressive designs

With the main objectives of providing convenience to the customers in laundry service access and minimizing the time-delay for the whole laundry process, on-demand laundry services are getting familiar in recent times. Customers generally expect a single window to fulfill all their needs. They also expect the chance to save

time, money, and effort. Our laundry app clone script includes all the necessary models associated with the features to make the laundry service providers run the business operations smoothly.

The Uber for Laundry App is an upgrade with advanced metrics like instant locating of the laundry service providers, booking them, assigning the schedules for the pickup and drop of the clothes. The top-notch laundry app clone script is the perfect fit model for any scale of business needs and fluctuations. With the prior mention of the date of the laundry pickup directly in the app itself, It allows both the customers and the laundry service providers to interact closely and balances the issues in order pickup and delivery.

With the preliminary option like email, social media profiles, the customers can be easily registered and built their profile with needed metrics.

Customers have the options like the number of clothes, type of color, and the weight to specify the details and send the dry cleaning requests.

Allows the customers to easily set the prior schedules for pickup and delivery. This reduces delays in laundry services.

As per the customer ordering requests, the respected cost value is computed via advanced analysis.

With the generation of the automatic alert, the customers get ready to organize the clothes in prior either or ready to receive the order wisely.

With the inclusion of real-time analytic say tracking, our app allows the customers can easily know the current status of the laundry service provider itself.

Customers have multiple payment modes like cards, digital wallets, net banking, etc, our app allows them to pay the amount digitally and in a secure form.

After the entire service completion, the customers host their experiences in the app platform through this rating.

Right from registering to the handling of a new laundry service, the profile containing all the service details is formed digitally.

As soon as the new laundry requests are initiated, the laundry service provider can get immediate alerts via the

app itself.

This allows the laundry service providers to set the active or free state based on their service handling. Due to this intimation, the customers can easily go for the next option.

Allows the laundry service provider to know the current location status of the customers and performs the trip via minimum distances.

This allows the laundry service providers to send the periodical notification to the customers regarding the laundries.

Depending upon the service selection, the number of clothes, and the volume, the fare estimate is computed easily.

With this option, the laundry service provider can immediately access this history of the orders directly and categorize completed from pending

Allows the laundry service provider can directly communicate with the customers to get clarifications in the detergent selection and the washing powders.

All the service providers can be easily managed by this interface. Accessing all their details and bringing them into the limelight is achievable with this option.

Admin has the feasibility to look at the customer profile information and the credentials to know their preferences and update accordingly.

As per the customer's requests and the available laundry service providers, the cost value is getting optimized and updated consistently.

With this option, the admin has the flexibility to manage the entire orders in a single window with price variations, the number of peoples involved, etc.

After every service completion, the laundry service payment is directly credited to the account, and the overall payment history is also viewed.

Depending upon the materials of clothes, the dry wash services differ. The category formation of each service is achievable with this option.

Admin can directly deduce the commission value for the laundry service providers easily with this option.

After consecutive monitoring of ratings, the admin has the control to assign the high-ranked player to the top of the searches easily.

It allows the laundry service providers to expand its applicability to different kinds of services in various domains as follows.

Allows the laundry service provider to start their pickup trip as per the customer's request quickly. Instant laundry order processing within the same location is possible.

Includes the appropriate interfaces for all the stakeholders involved in laundry services to make the quality of the service a highly perfect one.

Allows the customer to book the specific laundry service providers repeatedly with multiple times based on the satisfactory services they offered.

By the incorporation of direct deduction of commission and the referral-based methods, the laundry service providers get instant earning and get profitable quickly.

During emergency and high-priority needs, direct interaction with the laundry service provider is possible via in-app messaging services.

Based on the ratings or the location specification, this allows the admin to create the pool of the laundry service providers for easy access.

Allows the admin to keep on updating the laundry take-over records and manages the completed entries with the payment value.

Allows the service provider to easily expand the laundry service to any region without affecting real-time issues like language and currency issues.

Page: Gojek Clone, Gojek Clone Script, Multi Service App Like Gojek

Be a game-changer in the on-demand service industry! Our Gojek clone script allows you to extend your control on various services under one app. A ready-made solution acts as an all-inclusive platform to register your service as a niche one in the on-demand market.

Let's Move Forward With Your Project

Gojek Clone script is a ready-to-launch on-demand multi-service app in-built with several custom-centric requirements. It smartly assists in building a new business app optioned with various on-demand services such as handyman, taxi service, tow truck, laundry, doctor booking, etc. The ready-made app makes startups so cost-effective to the respective marketplace as well as creating a possibility of affordable investment.

Gojek clone app script is an integrated platform to do multi-service and provides stress-free service booking options to the users. With this single platform, customers can avail of multiple services like in-home services, auto-care services, beauty, etc. Usage of separate apps for these services with separate login credentials is the tedious one for the customers. They are looking for the booking of multiple services via one-platform. The most awaited option is now available for the customers. By simply specifying the preferences related to business requirements and place, our clone app makes you a successful appreneur with some unique metrics as follows.

A white-label script and can be redesigned with your name and logo.

Multi-scale platform to fit any services.

Platform compatibility: Android, iOS, and Web, etc.

Unlimited service offerings.

Customization nature assures the fastest market penetration and updates.

Easy-to-expand any services with a scalability nature.

Smart & secure payment interfaces.

Timely support.

The rapid increase of app usage brings more innovations to the on-demand service industry where booking

everything in a conventional manner. But, the usage of separate applications for each service brings an additional burden, and remembering the login details is a crucial issue to the users. What happens if all of them are integrated into a single platform?. Yes. Gojek clone app for multi-services is a perfect choice and this provides convenience in the booking of various services on a single platform. The creation of on-demand services apps like Gojek will also bring the possibilities to the service launchers for high-revenue.

Kickstarting on-demand services is now easy with the arrival of apps like Gojek. The dedicated interfaces for the service professionals and the sub-category players in this app solution make the service providers feel better to handle all in-out operations. This app not only provides wonders to the customers and the service providers but also acts as the perfect techie-partner for the service handlers in real-time. Right from the new appointment approval to the payment collection, the uniqueness in all the stages makes the on-demand service a prominent one and it is accessible by large-size users. Due to high-accessibility, the number of users and service providers is increasing that increases the productivity of the on-demand services.

Grow only when the update process continues. You can get 100% source code and hence you can change it as per future needs without depending on us.

Registering a brand in the on-demand service market is an easy one since our Gojek clone script is a white-label solution.

Our app script is the best-fit solution to scale-up the business value. This allows the participation of unlimited service providers that increase profit easily.

Without any issues due to linguistics and the currency variations, launching and managing the on-demand multi-services globally become easier.

Direct inclusion of personalization strategies makes you retain the customers for the long-term and bring new customers also.

The design of our Gojek clone modules is based on the factors of usability, easy accessibility, and updates related to service requirements.

Multi-mode payment options included in our app allows the customers to pay the service charge effortlessly

anywhere and anytime.

Backed up with robust software architecture, our app script allows you to launch 'All-in-one' services and provide numerous services to the customers.

Support continues even after app development too. You can easily contact us for customization and any issues.

Our app script is pre-built and this supports you to launch the on-demand services in a super-fast manner.

Customers can easily register with their basic credentials like email, mobile number, and social media accounts and login via such credentials easily.

This allows the users to search the nearby service providers available in the market with the reviews, service offering templates, and the skillset.

After verification of profiles and the ratings, the customers can raise the requests by specifying their name, mobile number, type of service required, and location details.

This helps the customers to view all the details related to the type of service selected like invoice number, service date, service fee, and payment method, etc.

This makes the customers book the service either instantly or schedule it for later as per the availability. Customers can change the appointments later on.

With the GPS option, the customers can easily track the service provider's location and their travels till they reach their home.

Once the service is completed, the customers can easily pay the service charge through this smart payment gateway like wallets, cards, net-banking, etc.

Star-based ratings and feedback sharing options allow the customer to validate the service quality and the service provider's status.

Allows the service providers to upload their documents showing the experience, skills, and educational background related to the service digitally.

This allows the service providers to create the profile by specifying their details like name, email, mobile

numbers, and locational details easily.

The toggling of the availability allows the service provider to show whether they are handling service or free currently.

Once the availability is free, then the service provider accepts the request and they reject if they are busy with other services.

By integrating the calendar within the app, the service provider can set the schedules for the accepted services and deal with them without any collapse.

The route analytics allows the service provider to know the exact location of the customers and the number of optimal routes available to deal with the services in minimum time.

With this option, the service providers can easily manage or update the services as per the market trends or customer needs like time, place, etc.

For every service completion, the fee collected via smart payment modules is recorded and this history brings transparency in real-time transactions.

Allows the admin to create a list of all the services handled by the service providers. Access to this list makes the admin make the requested services available on-time.

This makes the admin access all the details of the service provider and views the essential information like name, service history, payment collection, etc.

Admin has the power to verify the credentials of the service providers thoroughly and then added them into the service portal to receive appointments.

As per the customer requests, the admin can add or edit the service details and the category list in order to make the service professionals complete requirements quickly.

This makes the admin launch the service in a new region by partnering with the service providers easily with this customized app interface.

For each service completion, the clear analysis of payment collection and the respective commission deduction are monitored with this option.

During emergency cases specifically, healthcare needs, the admin assigns the respective service provider and topmost priority to the service requests for timely completion.

Admin can easily decide the number of promo-codes and create them from its web-panel to offer the discounts, offers to the users easily.

Doctors' on-demand app acts as the feature-rich platform to aggregate the number of doctors in a single window to manage their appointments in a seamless way.

The lawn care booking services app allows the users to find skillful lawn care professionals and book the appointment with them in order to make the lawn look better.

Acts as the white-label maid finder to book the cleaners and track them consistently in order to bring the outlook of home or offices in better form.

Right from the window repair to the wall-treatment, all types of handyman services are carried out with dedicated dashboards for each professional.

With the simple booking of the laundromat, the cleaning, folding, etc on the clothes are achievable. This also brings numerous revenue-gaining options to them in real-time.

This allows the users to find the dog-walkers available in the market and book them easily on convenient schedules to help the dogs freely move away from the home.

Demand for the coaches is observed everywhere such as business, fitness, parental, etc. This app makes you

book skillful coaches and get valid suggestions from them.

Bringing the smart look by booking the beauticians directly at your doorstep is now possible with this app.

The feature-rich platform creates uniqueness in this industry.

A trip to an unfamiliar region is now easy with guidance from the tour planners. Prior to making the trip, booking tour planners bring convenience in travel with this app.

Right from the construction site to the industrial plants, the demand for workers is high. This app allows you to fulfill the demand easily and provide jobs to them.

Entertaining the people during the events with the perfect soundtracks is the major activity of DJs. This app allows the users or event planners to book the right DJ at the right time.

Bringing both the interior and exterior looks are better with the help of skillful painting services. This digital platform connects those painters with the homeowners closely in real-time.

This app brings physiotherapists directly to the home and brings back the workflow of the muscles in their original form from any injuries.

Demand for tutors related to academics, music, and languages is an increasing one. Creating a unique interface between the tutors and knowledge seekers is now easy with this app.

The need for repair experts for smart appliances like TVs, computers, and mobile phones is high. This app allows you to easily fill the gaps in the identification of skillful professionals for that.

Right from the minimum events to the big conferences, the presence of translators now made them attractive and attentive to speeches via the app.

We offer the exact licensed source code where the app is built and the robustness of our Gojek clone script makes you able to add any services to this platform.

We will provide the white label app with your own logo and the name of the services and hence you can get complete ownership for your brand in your region.

After the launch of a multi-services app like Gojek, consistent upgrades as per the customer needs and the trends from us make you attain sustainability in the market.

Top-rated service providers from the customer's positive reviews can easily get repetitive appointments by placing them at the top of the searches.

Our app script allows the service providers to change the settings as per the number of services included and the players involved without any limitation.

The booking process can be done via multiple options like in-app calls, requests within the app, and the web-based. Hence, the convenience in service access achieved.

Gojek clone script from us arrived with the nature of extra languages and the currencies that allow us to launch the services globally.

Our app script provides seamless payment options like cash, card, and wallets to make the customers feel-free payments and perform transactions in a secure manner.

Avail maximum revenue benefits quickly with simple service registration as follows

For each service completion, the percentage of the commission from the whole service payment is directly credited to the service provider's account.

Gojek clone app design with these options ensures customer retention on on-demand service models for a long-time. Plans can be varied according to the region and user preferences.

One of the unique options from us to assign the fee for the process of making the top-rated service providers at the top of the searches to get more appointments.

Among the number of services available, the fulfillment of the needs instantly gets numerous appreciations in real-time. Assigning a special fee for such concern increases the revenue value.

By allowing the service handlers and their friends to host their advertisement on the app, and assigning the fee, gaining additional revenue is possible.

Assign the premium fee to the long-term customers as well as service professionals to get more money quickly.

To get fulfilment in top-priority services like medicines and other emergency tasks, a special fee is assigned

and this will help the service provider to earn good revenue.

In some cases, there is a definite interval between the services. If the booking customer takes more time and then the waiting time charge brings additional revenue to the service provider.

When a number of players are involved, the quality of the service professionals decides the appointments. Assigning fee to quick validation also increases the overall revenue.

Multi-Services in One-Window is possible with the perfect on-demand service app like Gojek here! Our specially designed app script allows the people to launch and become familiar appreneur in the on-demand service industry. Specifically, our app script makes you customize the business model as per the needs. .

Fill up the form given below and our technical expert will guide you on the right track.

After the arrival of mobile applications, booking the services directly at the doorstep is a familiar activity on the user side. But, there is a need for a separate app for each service to bring the burden to the users. Hence, the integration platform for all the services is required. One such integration platform is the Gojek app script and it acts as the full-fledged connecting platform for service providers and customers.

Yes. With the implementation of unique features and the customizations on the white-label solution, you can launch your own business in your region with the desired logo.

Due to the scalable and customization nature of our app script, the number of services is not restricted. Probably, you can handle 60+ services in one-platform.

There is a special team with enough knowledge to maintain the communication as strong and assist the service providers to do the flawless services for the users.

The direct conversation with the app development players via multiple streams like chat, email, and chatbots enables you to launch on-demand services quickly. Alternatively, the service providers can easily connect with development players by sending queries to .

The features like smart geo-fencing, smart payment modules, consistent tracking options, and separate panels for all the players to assure high-quality proof of services.

Page: Uber for Tow Trucks, Tow Truck App, On Demand Roadside Assistance App

The easiest way to start your app-based towing truck business with this tow truck script.

Extremely fast implementation and customization.

Let's Move Forward With Your Project

The way Uber revolutionized the on-demand cab service has always

fascinated you, right? Just like the nearest cab reaches you once you have booked it through the Uber app, this clone script does the same for your towing truck business. Our clone script works much better in the following manner:

Kickstart your towing truck business with immediate effect.

Complete customization and branding as if it is a custom-made towing truck app.

Full support for installation, deployment, customization and maintenance.

Unlimited users and admins can use your app at the same time.

Inbuilt anonymity with call masking.

Separate versions available for Android and iOS to leverage native capabilities.

Easy incorporation of toll charges, driver tips and waiting charges.

Accommodation of other businesses of similar on-demand models.

Malcolm loved his towing truck business. With

families owning multiple vehicles there was always one or another car or a four-wheel-drive breaking down and people calling his office to get the vehicle towed either to the nearest workshop or a service center, or sometimes, even home.

His model was traditional, but it worked. He would

sell subscriptions so that his ongoing customers could easily avail his services through a fixed cost. He would also serve non-subscribers if they called him and requested a towing service in the case of an emergency.

Then, just as it happens with every business, the

competition increased and due to Uber-like services, fewer people were using their own vehicles that needed to be towed when stranded at isolated spots.

Initially, he offered various incentives to his

customers such as giving discounts and providing on-the-spot servicing in case there was a minor fix, but the number of his customers kept dwindling and there came a time when he started contemplating closing down his office and selling his towing trucks. He was also buried in debt.

In a technology magazine he read about the surge in

on-demand mobile apps. The idea of turning his towing truck business into an on-demand mobile app-based service excited him, but he was already in debt and felt that he didn't have enough money to hire an app development team.

Being an entrepreneur was in his blood. He couldn't

give up easily. He kept looking for solutions on the web. He spent hours on various online forums, interacting on social media and doing his own research.

Then, one day he came across SpotnTow. Initially he

was a bit skeptical because he thought why would he use a clone app? He thought that using such an app would be like stealing the idea from the other company.

Though, his interest was piqued. He did some more

reading and realized that despite being an Uber for tow truck clone app, it was actually a framework that could be used not just to create a totally different app, but also to provide a completely different experience to the users.

He contacted the developers of SpotnTow. It was easy

for him to pay for the script and for the services provided by the developers.

For years he had been in the towing truck business.

He had an inquisitive mind but IT not being his field, he wasn't aware of the concepts like cloud services, mobile app and other such stuff.

All these technicalities were taken care of by the

SpotnTow team. Within a few days, he was able to download the mobile app on his mobile phone and set himself up as an admin. The dashboard was amazing. He could easily create various sections and change payment settings.

The best thing about the app was that now it was very

easy to organize his fleet of towing trucks. Whichever towing truck was nearest to the customer could easily get to him or her and provide the needed help. This immediately struck a chord with the stranded

customers.

He was sold.

His business began to grow exponentially when other

towing truck companies and individual towing truck owners started

getting their vehicles registered in his mobile app on a revenue sharing

basis.

The app can easily get the coordinates of the

stranded driver within the perimeter of a few meters. Consequently, less

time is lost giving the specifications. People can simply hit the SOS

button and the help is on its way.

People are subscribing to his towing truck service

through the SpotnTow towing app like uber in droves now. Thanks to

SpotnTow, Malcolm is doing more business than he was doing before.

Want to know how Malcolm achieved that?

SpotnTow isn't just an uber like app. It is a ready-made framework upon which you can

customize your own towing truck app.

Comes with a great interface for installation and customization. Do it yourself or with

the help of the developers.

Multiple payment modes are available. Your customers can use credit & debit cards as well

as various available digital wallets.

Both pay-per-use and subscription payment models available.

On the spot as well as schedule booking.

Your own referral system to get more customers for your towing truck business.

Inbuilt customer support chat with AI-powered chatbot as well as human-to-human

interaction.

Different sections for registering towing trucks, customer vehicles and customers themselves.

Multilingual support to enable you to run your towing truck business in multiple region.

For Android and iOS. Cloud-based. Includes web interface.

Customers can maintain their profiles and choose to get different services under multiple categories for multiple vehicles.

Using an animated map, customers can track the movement of the towing truck when coming to their rescue or while towing their vehicle.

Customers can make on-the-spot booking as well as scheduled bookings.

According to pre-saved parameters, your customers can get immediate estimate of how much the towing service is going to cost them.

Give another incentive for customers to join. They can earn money or privileges by recommending your mobile app to other customers.

The location of your customers is shared with the towing truck drivers in real-time for faster reach and accessibility.

Customers can review the drivers or the providers and the drivers and providers can review customers. They can give ratings to each other.

Customer support chat: Customers can chat with your support for real-time assistance in case you are facing a problem.

Towing truck owners and providers can accept or reject bookings through their dedicated dashboard.

Towing truck owners and providers can accept money into their digital wallet from the digital wallets of the customers or even from non-wallet sources

such as net banking and debit & credit cards.

The owners and providers can make extra money through referring other customers and towing truck providers.

You can send in app notifications to the drivers individually as well as in groups.

Accommodate customers speaking multiple languages. Providers can accept multiple currencies.

Drivers and providers can get ratings from the customers or from the admin.

Providers and drivers can quickly create an account using their existing social media credentials.

Speed is very crucial for the success of your system and this is why our booking app accommodates faster listing approval so that the tow-truck can be made available to the customer as early as possible.

Manage individual customers or group them under various categories and labels to manage them en masse.

Define different services that you provide through your towing truck business and charge your customers accordingly.

Approve and reject vehicles. Allocate them to various areas. Use different payment models for different vehicle categories.

Add and block drivers and service providers manually. Change their profiles. Make custom payments.

Keep all the important documents about drivers/service providers under their profile including their licenses and insurance copy scans.

Offer coupons to run promotional campaigns both for service providers and customers.

Run promotional campaigns through the dashboard and reward referrals with money and services.

Get a complete picture of where your fleets are and how they are engaged in their duties.

Don't run a towing truck service but still want an Uber like towing app script to run a similar business? The sky's the limit when it comes to leveraging our SpotnTow tow truck app script like Uber. You can charge a percentage or a commission from service providers. Here are some cool ideas:

Run a vibrant tutoring business whether you are a tutor yourself or you want to provide a service to independent tutors and students looking for professional tutors.

Run a hospital or clinic right from this Uber-clone app script that helps you launch an on-demand mobile app. Doctors can list themselves and patients can book appointments with their preferred doctor or position based on his or her specialty.

Run a handyman business from the comfort of your home. Let other handymen list

themselves and provide services to your mobile app members. The nearest handyman can rush to assistance.

Let security agencies and individual security guards provide their services through your on-demand app where people and organizations needing security can make scheduled bookings or avail the service on an ongoing basis.

Mobile laundering services or traditional laundering services can use your app to provide laundry services. Dirty laundry can be picked based on appointments and clean delivered according to the inbuilt organizational calendar.

You can help people avoid parking woes by enabling them to book parking space in advance using your mobile app.

Young parents can book babysitters directly from the on-demand mobile app using a friendly interface, paying by the hours through the app itself.

Eliminate the reason to wait for a car wash. Your app members can book their car washing in advance so that they don't have to wait in a queue. Immediate payments. Real-time reviews and ratings.

Take your business online or multiracial. Allow your users to use the mobile app in their own language whether they are providing towing truck services or booking appointments. Similarly, you can launch your towing truck business in multiple countries with multiple currency options.

Use the payment gateway of your choice to accept debit and credit card payments as well as net banking payments.

The toll charges calculations can be integrated within the service payments if your towing trucks provide interstate services or pass through toll booths.

Allow your tow truck drivers to earn extra cash with the incorporation of tipping facilities.

Organize better by having a heat map view of the movement of your trucks to avoid congestion, increase or decrease charges and provide better services to less frequented regions.

Allow your towing truck drivers to charge your users according to the time they spend waiting, automatically through the app.

Both users and drivers can choose to mask their phone numbers to maintain anonymity and protect their privacy.

Your users can save money by adding credits to your app's wallet for convenient as well as micro payments.

Wondering how many additional revenue streams you can generate with your towing truck app script?

There are many:

You can charge an extra fee by providing a verification status to your towing truck provider so that they can get preference as well as a higher fee from your customers.

You can provide an opportunity to your customers and providers to make money through referrals and in the process, earn a commission yourself.

By paying a small fee, both customers and providers can have different membership options and based on these options, various facilities and discounts can be made available to both.

Each time a customer pays for a booking, you can earn a commission fee.

You can allow your towing truck providers to advertise their services in their chosen areas or during their preferred timings.

You can charge a fee from the providers for recommending their services to your customers and you can allow them to use additional features for extra charge.

You can charge a fee from the users for premium registration and get extra facilities like regular servicing of their vehicles and priority pick up in the hour of need.

Usually your providers have to wait in case the vehicle cannot be towed right away. A wait time fee can be charged, and you can keep for yourself a small amount of this waiting fee.

A small amount can be deducted from the refund when a user cancels an appointment.

You can also make a commission by setting a minimum booking amount so that each time your customers make a booking, you earn a commission.

Please rest assured: this is the best possible Uber for towing app script you can get that is powerful, feature rich and above all, easy to setup and customize.

Submit the form given below and we will get you all the details you need to get started.

Uber for tow trucks can handle payments both offline and online.

A wrecker dispatcher is a person/ software that coordinates the dispatching of tow trucks to respond to requests of customers for roadside assistance, such as a vehicle breakdown or accident.

You can promote your towing business by generating word-of-mouth referrals and positive reviews. Providing an online facility to book tow service can provoke positive customer experiences and can promote your business.

By creating a website and a mobile app you can take your existing towing business online or start a new tow

truck service online.

You can get customers through online platforms. So, having a website and Uber for tow trucks app solution can help you to get more customers.

Creating an online marketplace for towing services is the easiest way to start a towing business. An Uber like towing app solution can help you to establish an online marketplace for tow truck drivers.

An Uber for tow trucks can create online presence and visibility, streamline operations, improve customer experience, increase revenue, and enhance accessibility for your towing business.

With the inclusion of the lingual and currency support, the participants use theUber for Xapp in their own language and transfer the charge irrespective of the currency variations.

Customize the payment gateway with various options like the card, cardless, digital wallets, net banking, etc based on customer's preferences.

This allows the customers to select the specified service handler as per quick analysis on the reviews/ ratings and personalized experience. This also supports repetitive booking.

With the offering of high-quality and timely services, the service handler can get the extra-cash by including this option in the app itself.

With the integration of clean map facilities, the status of the current location and the movements of the service handlers are known. Based on this, the service charge can be set.

All the reports related to the service trips, service charge details, and the commission available in digitized form.

Customers can easily view the transactions carried out and add the amount to the wallet to make the payment as easy.

With this option, the admin can view all the service bookings and trips through the integration of map-based options.

By simply onboarding on our Uber for X app, you can experience many real revenue benefits:

Charge the fee for providing the verification status to the service handler and the potential customers to get more preferences in real-time.

By sending the invitation code to friends and making them use this app, the customers and the service provider can easily earn the respective commissions easily.

With the inclusion of diverse membership plans, the customers and the service providers retain the business model and use it for any service booking.

By making the service providers advertise their services within the app, you can get the respective commission through an ad fee.

This option allows you to ask for the extra charges for the recommendation of new services and the extra features if customers requested.

During an emergency or if the customers require immediate solutions, the service provider sets the priority for that. The special service charge to be assigned to the customers for this.

After booking a service provider, there is a special mention for the grace period for the visits. Set a charge on each excessive time limit of the grace period, the wait time fee is calculated.

If the customer cancels the service appointments, then the small amount of deduction adds to the revenue for the service providers.

While customers pay for the booking, the admin can get the respective commission on their accounts easily.

Grab Taxi clone app from SpotnRides enables you to launch an online business and get a boom in the on-demand market quickly. A well-crafted Grab clone app from SpotnRides helps your business is the best option for the customers

with the unique feature-set.

Let's Move Forward With Your Project

Grab clone app is one of the open-source multi-service booking scripts to make the service providers carry many on-demand services to the customers through the customized version of the base platform called Grab.

Technical needs

for running the on-demand business in a smoothie way are high in recent days. With the objective of providing sophisticated customer service and gaining more profit, the startup owners look for an update in the business model.

SpotnRides built the customer-centric Grab Taxi clone Script that allows you to greet the users with additional services like delivery with taxi-services. The features that make the Grab clone app to be an excellent platform

for entrepreneurs to run the business effortless manner are:

All-in-one Service Platform

Customer-Centric Features

User-friendly Interfaces

Electrifying Business Model

Quick App Deployment

App-based Multi-Income Options

Platform compatibility

Tailor-Made Custom App Solution

Get A Live Demo of Cabify Clone App in both Android and iOS.

People move towards an app-based service booking and ordering things after the evolution of the related applications. As the same as that of, the app-storage is also the main thing for the users. Downloading of the application related to each service leads to storage issues and hence they look for a one-stop solution for all. To meet this demand, SpotnRides comes up with a unique app solution namely the Grab clone app.

With the inclusion of dedicated app interfaces, Our Grab clone script extends the mobility service into the multi-service platform where it carries the delivery, rentals and personalized bookings, etc. This opportunity makes all the service providers, service handlers acted as the business participants under a single module to deliver a wide range of services to the customers.

The unique features of our clone app Grab like real-time tracking, efficient trip/order management, feasible booking options power up the online business as per the customer preferences. The honorable mention of our Grab clone app solution is the brand assurance through the custom metrics like logo, UX design, etc depending upon the latest technologies. Get your own Grab clone app from us to improve your growth.

Users can instantly signup for the app by specifying their credentials like emails, phone numbers, and social media profiles.

Users can easily configure the profile like name, address, preferred payment method, image, contact numbers, etc directly in it.

When the trip needs arise, the users can immediately search the current location by Google analytics automatically or set it manually with this option.

Allows the user to set both the pickup/drop location to initiate the trip. With this option, the user also sets the ride either for now or later easily.

Users can easily view the fare estimate depends upon the travel distance as well as the vehicle selection immediately.

Users consistently track the driver or vehicle location currently with the mapping analytics and make further

plans accordingly.

Allow the users to reach the emergency contacts with a simple click in the app itself.

Allows the users to host their feedback either by short review or ratings to identify the service quality.

With the simple entering of the credentials, drivers can immediately register their participation in the app-based business models.

Documents like driving license, experience certificate, and grades are digitally uploaded for verification.

With this option, the driver can immediately show their presence either online/offline prior to trip initialization.

Based on the availability, the driver can immediately accept or cancel the new trip-requests.

Allows the drivers to view the traveling distance visually to make the trip in the minimum time interval that leads to high-productivity trip hours per day.

After the completion of each trip, the earning details are recorded and the whole history is stored for future analysis.

Drivers can immediately call the customers in case of any emergency needs or the alteration in a location easily within the app itself.

To encourage the cashless transaction and seamless commission gathering, the drivers can add or edit the bank details without any hassle by using this option.

Admin can easily view or manage the whole operations with the powered rich dashboard.

Allows the admin to manage the user-profiles and the information regarding the location to make the services as convenient.

After the document uploading, the admin can verify the details thoroughly prior to make them onboarding in the services.

Allows the admin to take control or monitor the driver information, the number of drivers who participated, and the user ratings.

The payment collection, number of trips completed, pending trips all are monitored by the single window

easily by this option.

In the case of the priority-based trip. Admin has the power to allocate the schedules for the trips and provide the corresponding intimations to the drivers.

Allows the admin to control vehicle selection from categories on the customer's app by defining the vehicle name, rate details.

This portal allows the admin to manage the drivers/vehicles count, trip booking management, service fee collection, and the commission details in an easy way.

Besides running the taxi-hailing business, Our customized SpotnRides Grab Taxi clone makes you serve various businesses:

This exceptional feature allows the users to view the complete table of the diverse fares on the basis of location for feasible trip selection.

This caters to your users and the drivers to earn the specific revenue by referring your service to their friends, family, relatives easily.

This allows the riders to specify the favorite spot and select the top-rated vehicle drivers for recursive trips.

This option in our Grab clone app is the convenient one for corporate professionals to do daily trips without any difficulties.

On the basis of the user's needs, this option allows them to select vehicles like large trucks, motorbikes, cargo cars, etc to make the fleet as easy.

Based on the emergency needs and the priority basis, this allows you to set the fare for the trips that highly disrupt the customer's cost value.

This helps to run the entire business based on the real-time fluctuations in the currency based on the region you are launched.

Allows the users to view the current transaction history and the recharge of the wallet within the single window of the Grab clone app.

Allows the participants in the service to view the content in their own language and change the language

preferences accordingly.

Call-based Taxi-booking is a familiar activity from decades ago. With the fast-changing technology and the arrival of advanced methodologies, the traditional way of taxi-booking is converted into click-based booking.

As per one of the expectations from the customer side like booking based on all details including price information, our Cabify clone script is specially designed with the appropriate options. The dependency

of the customers with the taxi-companies is always an existing one in order to complete the trip in an easy way. With the SpotnRides Cabify clone script, the taxi service provider has the ability to integrate

a wide range of taxi drivers and provide seamless services to travelers easily. The advanced features implemented in our Cabify clone script like the easy booking of taxis, consistent real-time tracking, smart

way of payment module integration, emergency handling metrics, instant cancellation, and the right price identification bring numerous advances in the taxi industry. The top ways of the Cabify clone script to

take the ride-hailing business into the next level.

The customer creates their own profile by specifying the basic credentials and starts to search for any taxi services in the nearby region. By encouraging all the participants like customers, drivers, and the admin

to onboard the application through social media profiles in our Cabify clone script, the visibility of the taxi services in the market is assured. The successive activities, location specification, booking the

taxis, tracking them in an advanced manner, enjoying the trips as per their interests, paying the amount digitally, etc will make the customers complete the travel in the expected forms.

The custom Cabify clone

app contains well-manageable interfaces that allow the participants to carry each

activity in the easiest ways. Business profile creation, rental options included in our Cabify clone script bring convenience

in all the aspects and take.

Customers get into the app platforms by registering simply via email, mobile numbers and social media profiles,s, etc.

By adding the necessary details like name, email ID, number, password, the customers can set their own profile for future trip orders.

Allow the customers either to select or specify the location details for pick up and drop prior to ride booking.

Customers use this option to select the vehicles among sedan, mini, SUV, etc.

Based on the location and the vehicle selection options, the fare for the trip is immediately shown to the customer's side.

Makes the customers be attentive to the exact locations of the vehicle and get ready for the trips in a stress-free manner.

Customers simply click this SOS button and the current location details are sent to the saved contacts automatically o emergency scenarios

At the end of the trip, the customers can host the reviews/ratings about the trip experience or driver's credibility, etc.

This option allows the drivers easily register their presence through social media profiles and get the verification from the admin before the start of the ride.

The major documents like the License, experience details, etc can directly be uploaded in the digital form for easy admin verification.

After the admin approval, the drivers present in the app lively and ready to get the service requests from various locations.

With the location-aware options, the drivers have information about the boundaries of the trips and also they can view the real-time transitions with the use of map integration. The feasible route for minimum travel time

is known with this option

Based on the travel status, the drivers either accept or reject the ride requests within the 30 secs smartly.

This option allows the drivers easily get information about trips and earning history like completed trips, collected payments, and pending trips easily.

This feature allows the drivers to easily deactivate the profile through the application itself.

The drivers can easily call or text a rider for immediate ride requests

Allows the admin to access the drivers and customer panels to know the current activities in the taxi-hailing process.

Allows the admin to add/delete the driver or customer as per the requirements easily

Based on the trip completion, the total fare for the trip per day is easily managed

Admin directly accesses the document details, credentials and provide the approval for participants.

Admin use this option to track the earnings for the whole trips on a daily, weekly, monthly basis

This option allows the admin to make an eye on the driver's earnings after the completion of trips.

This allows you to manage the reviews or feedback about the trip and take the smart decision for player retention

Using this option, you can configure the entire taxi-operating system activities like mail sent, audience management, SMS management, tracking, etc.

Besides running a ride-hailing business, SpotnRides makes you to extend your service in various domains:

Allows the drivers to start their trip without getting the initiation request. This feature is a fruitful option for the street rides, elders trips, etc.

Makes the customers book the taxis on an hourly basis or day basis. This feature is the supporting one for the corporate professionals and those who perform multiple trips.

Cabify clone app has this option to make the drivers and the customers earn the benefits by inviting their friends to increase both drivers and customers

Admin or taxi service providers use this option to mark some zones as red zones to avoid danger during a ride.

The special integrated module in the Cabify clone app allows the drivers as well as the customers to share confidential details after booking.

Allows the customers to book the taxis especially for outstation trips

This option included in the Cabify clone app allows the daily travelers to set their own trip preferences through the ride pass details.

This allows the service provider to easily expand the business into many regions across the seas without considering any language and currency barriers.

Stand Ahead in Market With Your own Best Cabify Clone App

Fill the below form and send it to us to launch your dream startup quickly.

A digital booking platform looks like the familiar Cabify application that allows the customers to find the taxis available nearby with them easily. This also provides the chances for the taxi-service providers and the independent

drivers to build the business and get the expected revenue easily.

The independent drivers and the several riders experiencing the real-time benefits if they partnered with the Cabify clone script. Visibility, smart earnings, scheduled booking, outstation trips, smart payment, etc are the highly beneficial things for the Cabify clone script.

To buy the user-friendly solution, the email dropping is an initial stage and immediately our team will contact you. After the preliminary discussions are getting over and the final plan is set, the Cabify clone app design

is initiated with the most-needed features. After the design is over, We deploy the driver and the passenger application in both Andriod/iOS platforms. Additionally, the admin panel and the backend database are hosted in

the AWS server.

Yes. You will get full ownership and the license for the base code.

Yes. SpotnRides offers customization to any extent to serve the on-demand taxi service, business model. We will surely provide the tech-support for customization to make your service a sustainable one.

Page: Taxi Dispatch Software, Fleet Management Software, Taxi Dispatch System

Transportation scheduling and fleet management was never easier. Deploy out-of-the-box or customize.

Let's Move Forward With Your Project

Whether you want to modernize your taxi business or exponentially boost the efficiency of your trucking and fleet business, this taxi dispatch software perfectly fits the bill.

Completely scalable according to your unique business needs.

Equipped with cutting-edge technologies to track locations of individual taxi, truck or any other vehicle.

Customizable and deployable with minimum fuss.

Multi-device interface including Android and iOS.

Parallel processing of multiple vehicles, users, schedules and movements.

Centralized dashboard to manage and control all the features of the software.

Very friendly visual interface to customize and brand every aspect of the software

Simple and advanced reporting for analytics and business improvement intelligence.

Download the taxi dispatch software available both for Android and iOS.

New users can register themselves with just a few taps and start using your taxi or transportation service immediately, with zero lag time.

The riders won't be caught off-guard because they will know in advance how much their travel is going to cost them.

Just takes a few taps and the entire process of finding the transportation, setting the schedule and booking happens in a blink.

The ability to schedule transportation in advance is one of the biggest strengths of SpotnRides.

The riders can immediately know where the vehicle they have booked are station right now and to where it is moving.

The drivers of the vehicle can be immediately reviewed by the riders, helping you weed out inefficiencies.

In case the rider feels anxious or in danger, he or she can immediately tap on the SOS icon and appropriate

help can be rushed.

Riders can pay using credit cards, debit cards and multifarious digital wallets available these days

All the taxi, truck and two-wheeler owners that want to join your fleet can register and verify themselves easily

Whenever one of your drivers is needed he or she can be sent instant alerts and he or she can respond according to his or her availability. Happens within a few seconds

Drivers of your fleet can easily upload their IT proofs and license documents using the inbuilt interface of the transportation scheduling software.

All your commercial vehicle drivers can access their billing and payment history immediately, sorted by day, week and month.

The software can keep track of your individual drivers along with the scheduling and time so that you know exactly how they are performing and how punctual they are.

In case one of your drivers gets into trouble, he or she can immediately contact the headquarters and seek help.

Scheduling is important both at macro and micro level. At micro level, drivers of all the vehicle and transportation services will be able to maintain and track their schedules.

The riders can choose which vehicle they want (out of the choices available with you) and the estimates will be accordingly adjusted.

Immediately know the places your drivers have been travelling to and how much they have travelled.

Get the exact idea of how much your individual drivers are making themselves as well as for you.

Manage all your drivers and ongoing riders with a single dashboard from every angle

Being a 360-degree dispatch management software SpotnRides allows you to manage a wide spectrum of vehicles from a single dashboard.

The on-demand dispatch software comes with integrated Google Maps that gives you real-time information on exactly where your vehicles are.

Control and manage all your fare settings from a central command system for different categories of your vehicles and even for different routes.

Use a single interface to pay all your drivers and manage their payment amounts and commissions with ready-to-use statistics.

Always be in the know where all the vehicles affiliated to your SpotnRides software are parked or moving or heading to.

You can use this excellent fleet management software solution for every dispatch management and scheduling need including

Your riders can book their or vehicle with their preferred driver, making them feel more secure and satisfied

The moment a vehicle is changed the information is reflected through the entire system so that there is no disparity.

Your riders will be able to share their experience on their social media profiles from within their apps.

Giving promo codes to your clients and riders is a great way of attracting new business to your service.

Through SpotnRides, you can organise promo drives through your dashboard.

To better organize their time your riders and clients will be able to schedule their rides or delivery in advance.

When you use SpotnRides you're not stuck with a single currency or language. The software application can be easily localized.

Get a single view of your entire business to understand the exact stage where everything is.

This is the best taxi dispatch software you can get in the market.

Submit the form given below and we will get you all the details you need to get started.

Taxi dispatch software is a solution for taxi businesses that automates routing and scheduling, using advanced algorithms to optimize delivery routes, track vehicles in real time, and provide other valuable features to improve delivery performance, reduce costs, and enhance the customer experience.

It is upon your business model and development requirements. Feel friendly to contact our business team at for correct details.

Yes. This software is as legitimate as it gets. In fact, it is one of the best and top fleet management software solutions in its arena.

Taxi dispatch software is a digital alternative to the manual taxi dispatching system. In which, your complete business management would be simple with real-time records.

A taxi dispatcher software will receive requests from customers, assign available taxis, monitor and communicate with drivers, and maintain essential records for a taxi business.

Taxi dispatch software can speed up the process of accepting and processing online taxi requests by automating and enhancing many administrative tasks. Thus it can help any kind of ride-hailing service including your business.

A taxi business needs taxi dispatch software when it needs to manage a large fleet, increase customer service and improve competitive advantage.

Taxi dispatch software is 360-degree customizable. So that, you could get your new software to meet all the requirements as per your fleet type.

The taxi dispatch system allows passengers to book rides in advance and automatically assigns drivers based on their availability using the mobile driver app and a customer app.

In the dispatch system, passengers pay their fares by direct cash to allotted drivers after the trip completes.

Page: Kickstart your Taxi Business with SpotnRides Uber Clone App

Build a Successful

Make your business more effective with an Uber like app with features to make taxi booking and tracking convenient for customers.

A white-label solution to

create a taxi booking app like Uber. The Uber clone script comes with a ready-made framework that can be customized to improve the usability and appeal of your app for users and drivers. The features of the app can make the customer use your business more easily from anywhere and at any time.

Your company can better

serve the on-demand taxi industry by utilizing this innovative taxi app development.

SpotnRides is a skilled team of Uber clone app developers that specializes in creating app portals that efficiently connect your company with your customers.

We love the satisfaction we get everyday by assisting our

customer and launch their dream venture! Here some of our feedback from our valuable customers,

Hey, this is Bjorn Brost, the managing partner at

Povezite.me. I am just here to let you know that the Uplogic Technology guys did

develop & code a taxi app at serbia for my business requirements. Their

cooperation was absolutely easy totally fine & technically high-end. They were

professional and reliable. I highly recommend Uplogic Technologies for any app

development project. Thank you.

Hi, I'm Tina Andrew, a business development executive at

Van App Ltd. in the UK. We used Uplogic Technologies for app development, and they finished the product on time. As a whole, it was a great experience working with them. Their creativity and communication have been great. I will take the opportunity to thank all the developers. We would highly recommend working with Uplogic Technologies in the future.

Hi, I'm Janne Siitari, CEO of Qupio Solutions. I have been working with Uplogic Technologies for more than a year to develop a taxi booking app for my new startup. Their app development team has the latest technologies and their cooperation was brilliant. I enjoyed the teamwork while working with business and developer teams. I can fully recommend Uplogic Technologies if you are hoping for app development for your business.

I am El Allen, CEO of Zzoom Business in the USA. I was initially skeptical about approaching app development companies abroad. But their work quickly dispelled my doubts. Work of Uplogic Technologies proved to be highly professional and honest. Furthermore, they patiently addressed all my questions and doubts. Thanks to their expertise and dedication, my app was a complete success and delivered promptly.

Hello! I am Ali Sadeq, from Albasri, Bahrain. We developed an app from Uplogic Technologies. They delivered everything they promised us on time and my project was complete success. Overall, we are pleased with the performance of Uplogic Technologies. They have very well equipped and knowledged team and are very helpful for my business. So I suggest Uplogic Technologies is predominant for app development.

Hi! My name is John, and I am the founder and chairman of Mailman Express. When I started this journey with Uplogic organization, they

had good communication. They understood my business requirements well. They are technically capable of developing apps for my requirements. They prioritize client's requirements at the top. Therefore, I highly recommend Uplogic Technologies for app development.

Hi! I am Jimmy Idiagbon, CEO of Flex2Ride Global Technologies Ltd. I am at the head office of Uplogic Technologies in India. Truthfully, when I started the project initially, I had doubts about the capabilities of the company. After seeing the working environment, facilities, and staff working in this environment, I believe in them. Especially the CEO, Raj, & the developers team are so amazing. Uplogic Technologies has done everything well.

Hi, my name is Flavio Edson, founder of FS DE Flavio Edson Dumbo Seminelo Group. I am here today to give a testimonial regarding the success of the development by Uplogic Technologies. Uplogic is the company we selected as a partner to leverage our app. They are experts and experienced professionals. Thank you very much, Uplogic Technology.

Hi, I am Raman Patidar, the owner of Jeezan Int'l Cargo & Courier Service Inc. I have been working with Uplogic Technologies to develop a courier app. I was impressed with the website for courier delivery products. All the necessary functionalities are present in SpotnRides. I recommended additional features, which they made available on time. I recommend them for any on-demand app development.

My name is Olatunde Ademouye from Nigeria, and my company, Niga Network, is based in West Africa. We chose Uplogic Technologies for on-demand app development and were impressed by their product, SpotnRides. Their team, especially Manoj, was polite, professional, and delivered on time. We are very pleased with their work and plan to continue our business with them. I highly recommend Uplogic Technologies to others.

Hi, my name is Robert Tonge, founder of Turner Life

Style Inc. and I am from Dominico. I contacted Uplogic technologies for the mobile app development for my business. I worked with uplogic technologies twice to develop app for my taxi and grocery business. They provided outstanding service on my both business apps. I highly recommend them to everyone for any app development services.

I am Gianfranco Pintus, CEO of FleteAr. We worked with Uplogic Technologies for our app development. We are happy with the service they provide and will continue to provide even after the completion of the project. They accommodated our needs, clean and clear from start to finish. We will certainly be recommending Uplogic Technology to anyone looking for a reliable app development partner.

Working with our Uber clone app development company will elevate your unwavering effort for your business. Compared to creating an app from scratch, creating an Uber clone app will take less time and money.

Personalization and Labeling

At our Uber clone app development service, you can personalize your app to match your business requirements. Develop your taxi booking app with your ideas.

Unlike custom apps, don't wait long to develop your app. You don't need to panic about time delays due to bugs. Just join hands with Spotnrides to brand your app and launch your app.

Our ready-made Uber like app is compatible with both iOS and Android platforms. Widen your audience and attract all users to your business.

You can manage the entire workflow of your business. And also view reports, status, make changes and add users through the admin panel.

A taxi booking app like Uber has an analytic feature to monitor business

activities and make prior decisions.

Scalability is key to managing increased demand. A highly scalable app ensures that as more people use the service, the app continues to run smoothly and efficiently.

Think of Uber as app development, and you will find some app development companies. But SpotnRides is the best choice to make your taxi business dream come true with our Uber clone app for your business.

Once you choose SpotnRides for the app development service, we install our script on your server at no cost. Since we use a white-label solution, the launch time is shorter.

We develop apps for your taxi businesses in the native languages of iOS & Android. We ensure the 100% compatibility of our Uber clone app on both iOS and Android.

We develop your app and help you publish it on respective platforms, like the Play Store and App Store, respectively.

Just our clients' testimonials can express our on-time delivery skills. We always work towards quality and punctuality in our app development service.

SpotnRides consists of skilled Uber clone app developers with more experience, that can make your ideas come true in your app.

Above all, we sign a Non-Disclosure agreement, or NDA, before we begin with your app development process.

With our distinct development experience and a cab app similar to Uber, explore the profitable online taxi booking industry with an Uber clone app.

Download our demo app today available both for Android and iOS.

Customers can download the app from the app store and log in with their email address.

Decide which nearby drivers are available, note the pickup and drop locations, and book the taxi.

The option to choose the date and time of the ride in advance can make it convenient for them to plan their rides.

The taxi booking app like Uber, is embedded with the map. This feature allows the customers to track their live movements on the GPS.

Obtain a fare estimate before scheduling a ride. Feel secure when making a taxi reservation with this option.

Customers can give ratings and reviews of drivers or rides or even their taxi booking experience using the app. This makes it simple for other customers to select the driver.

You can help your customers in an emergency by using the SOS button located on the app's home screen.

The consumer has several payment options, including cash, digital wallets, credit cards, and net banking.

Cab drivers can quickly sign up for the service by providing an email address.

As soon as a customer chooses them in the app, taxi drivers will receive instant alerts.

If your driver unexpectedly needs assistance, they can press the SOS button right away.

Drivers can obtain comprehensive data regarding their earnings for each journey they have finished.

The app will maintain the driver's track record & Can be viewed any time.

Drivers can add and modify available vehicle models.

Since the customer selects the type of vehicle as a filter.

Drivers can select their availability by clicking offline or online, according to their preferences.

Your drivers can upload documents directly through the mobile app, including identity proof, license, and registration certificate.

Admin can access the entire history of individual drivers with just a few taps in the app.

The information about a driver's earnings and contribution to your cash flow is displayed in the commission dashboard.

The administrator can edit or add information about the transactions and activities of drivers and users.

Get up-to-date information on drivers and rides at all times. This increases the safety features of the app by keeping us informed about the vehicle.

Once a driver accepts a ride, customers can see the driver's details, like name, image, and contact number.

The app displays all ride details for upcoming, completed, and canceled rides. Information will include the ride's location, cost, and date.

After giving a valid reason, the passenger may cancel the trip, but they may also be responsible for the cancellation fees.

Based on the chosen vehicle category and locations, the customer can see an accurate fare estimate broken down for the ride.

From the start of the trip until it ends, the driver and customer can see the vehicle's real-time location.

The customer can book the ride for an immediate trip or for traveling at a scheduled time and date.

Customers can apply a promo code to receive an additional discount on the total cost of the trip. The admin panel is responsible for creating promo codes.

Upon customer requests, the admin can assign taxis using the admin panel. With this personalized booking option, convenient travel is assured.

An option to fix a surcharge during rush hour or holidays makes more money.

Once the ride has been accepted, the customer has access to all vehicle-related data-for instance, trip number, vehicle type, and vehicle number.

There is no need to look elsewhere if your business is something other than a taxi. Our Spotnrides Uber clone app is suitable for various industries, including the following

Build a Robust Taxi-Hailing app like Lyft to Reduce riders' expenses and driver's stress. Make every customer feel comfortable and manage your business as efficiently with the advanced Lyft clone application.

Let's Move Forward With Your Project

Since the future transport industry is in the hands of on-demand ride-hailing apps, the entrepreneurs have the space to launch their own ride-hailing business through robust taxi-booking applications. An advanced Lyft Clone Script from SpotnRides allows the ride-hailing venture owners to manage the activities wisely and makes the customers feel comfortable while booking the taxi from anywhere. The taxi-service enhancement through SpotnRides Lyft clone app includes advanced features like:

Easy Accessible Interfaces

Loyalty Improvement Options

Brand Aware Strategies

More Customer Engagements

Fast Deployment

Increase in operational efficiency

Scalable, customizable solution

Android/iOS Compatibility

View Our Lyft Clone App Demo on Android and iOS.

Thanks to ever-growing technology revolutions, the influence of the ride-hailing application on the transportation industry is high. People looking for the option to turn their spare cars into a revenue-making tool have the valid option with our Lyft clone script. Since the taxi market contains giant players like Ola Uber, etc, registering the space for your business needs special practices and advanced features. Our Lyft clone script is not like a common application, it also acts as the best supportive partner for all the end-users in the taxi industry. The specialized features included in this Lyft clone script like one-tap taxi booking, vehicle

tracking quickly, and the scheduling of trips transform the ride-hailing business as powerful and make the venture owners deliver an amazing experience to the riders easily. The Lyft clone script power up the taxi booking venture in the following ways:

A rider who wishes to make the travel can easily register their profile initially. The registration can be in an upgraded form with the social media profile-based. In our Lyft clone script makes you know the customer's booking interests easily. The sequential activities after the registration process are searching for nearby available vehicles, booking the one who is available during the booking period, tracking them quickly and pay the charges smartly with the third-party payment gateways integrated in the App. The digitized options included in our script allow all the players involved in the ride-hailing business to experience the new way of traveling. This also proves the smartness in workflows and the efficient management of all the booking requests in anyplace effortlessly.

Customers initially get the easy login credentials by specifying the mobile numbers and email-id to get access and use for booking

Specify the pickup and drop location either direct or by searching on Google analytics.

Set their own profile as the traveler and locate nearby cabs based on location metrics and book for the ride.

After booking the ride, the fare for the trip can be estimated and showed to the customers based on vehicle selection. With multiple payment options like cash, card, and smart wallets, travelers also have the option to pay the fare quickly.

Travelers can easily track the cab movements lively using the Geo-location navigation option in the application.

Notified with the driver's movement with the distance and time information exactly. This also allowed the travelers to experience comfort in an unfamiliar location

Getting an instant help by just tapping this option inside the app window

After the completion of the trips, travelers use this option to share their trip experience or rate the driver's

performance for further enhancement

Drivers onboarding in ride-hailing service with simple registration via their personal credentials and generate their own profile with necessary documents uploading.

Getting updates from the restaurants if the order is packaged as per the customer demands

Based on current trip status, the drivers select online or offline options either for pickup or turn the riders to search for another respectively.

With the use of the in-built location-aware ad navigation option, the drivers reach the traveler's space quickly or within the specified time limit.

After booking the trips, the consistent status is updated to the customers with this option.

Drivers can easily get the details on the number of completed trips, fare collected, and the payment status wisely with this option.

Drivers can easily track the entire trip history prior to either editing or monitoring the trip according to the needs.

In case of emergency scenarios, the drivers are allowed to chat with either the travelers and the service providers related to trip changes with this option easily.

With this option, the admin can easily view the status of the active/inactive drivers anywhere and anytime.

Admin has the control option like add/remove drivers and riders by accessing profile details as per easily.

As per the vehicle selection, the fare estimates can be adjusted accordingly. They have the authenticity to select a perfect vehicle name, type, and corresponding updates.

Admin directly accesses the drivers and the riders quickly and get their live report based on google maps.

The payment for every trip is recorded in this option and visible to the admin for analysis.

This option allows the admin to make an eye on the driver's earnings after the completion of trips.

This allows you to see the driver's contribution to your cash flow.

Using this option, you can set the fixed price for some zones and get additional benefits from this booking.

Apart from running a taxi business, SpotnRides Lyft clone can be easily adapted to carry a wide range of services:

Allows the riders or travelers to book the ride for future travel. They can specify the scheduled period directly in this option for comfortable travel using our Lyft Clone App

Make the customers pay the traveling fee via various digital wallets, promo code options, etc in a comfortable manner.

This allows the riders to specify the favorite spot and select the top-rated vehicle drivers for recursive trips. This option in our Lyft clone app is the convenient one for corporate professionals to do daily trips without any difficulties.

Running the ride-hailing business as per the customer's expectations is the tricky option to stay ahead in the market. Integrating social media with the application allows you to track the customer's behavior, vehicle booking interests clearly and run the taxi-services as smart.

Allows the riders to start a conversation with the drivers regarding the location and changes in the trip where the call-based options do not exist.

This option allows more than one traveler on the same route to share the ride and this is the feasible option for the fuel cost reduction process.

This option allows the admin to easily access the trips completed, fare collection, commission earning per ride, and the transaction history report in a single window of Lyft clone app.

This allows the service provider to easily expand the business into many regions across the seas without considering any language and currency barriers.

Make a Good Start With Your own Best Lyft Clone App

Fill the below form and send it to us to launch your dream startup quickly.

After knowing the success of the Lyft application, the app development similar to Lyft starts increasing in the market. For the customization and the upgrade, the pre-built version is highly preferred and this is called a Lyft clone.

You are the owner of the entire Lyft app source code and the application will be hosted on the company server that belongs to you.

Yes. We will be delighted to provide full-fledged support both during launching and post-launch for the necessary enhancement.

You can earn money with the Lyft clone script by collecting the commission from the drivers who wish to stay in the top-of-the customer searches. With the integration of online platforms, you can also earn the referral-based earning premises.

No. There is no prior limit for the number of trips per day. As per the customer service requisition, the drivers can get unlimited trips that lead to gain more revenue.

Yes. Our team has a consistent touch with you during the entire development process. The suggestions and the inputs are collected from you for a feasible launch and further enhancement.

Multi-location access of handyman enhances the visibility

A full-fledged control platform reduces the burden of admin

Synchronized app design ensures smoothness workflow

Flawless service access due to customizable platforms

Multi-service platform to improve the customer engagement

In-app communication ensure strong collaboration

Visual analytics increases operational efficiency

Allows the customers to search and book the handyman based on their needs after registering via multiple channels within the handyman app.

View the entire handyman professionals list with the details like service specification, name, and contact details, etc.

From the handyman professional list, select the handyman according to the current needs, high-ratings, and location specifications.

By the integration of GPS-feature, the current location status of the handyman is exactly tracked and gets the information regarding the estimated time of arrival.

Allows the customers to fill up their address, contact numbers in a digital form that enables the handyman to access their details.

Allows the customers to set the schedule or time for the handyman based on the availability. This also ensures collapse-free services.

Upon satisfactory services in the previous booking, the customers use this option to book the selective handyman repeatedly.

Allows the customers to pay the service charge via smart payment modules like cards, net-banking, and wallet-based payments easily.

Makes the handyman create their own profile with service specification, a number of services handled and the experience details, etc.

This listed up the number of services to be handled and the corresponding handyman to ensure quick access from the customer side.

As soon as the new customer initiates the request, the handyman gets the instant alerts from this option and is ready to handle it in a proper way.

The service history option included allows the handyman to view the entire service history, the number of services completed, pending, etc.

With this toggle, the handyman can easily show their availability status based on the work or free to accept the service.

With this option, the handyman and the customers get connected smartly and perform the communication easily.

Allows the handyman can easily view the payments collected for the completed services and the pending payments etc.

Using this, a handyman can easily view the ratings hosted by the customers or feedback and transform it in the future based on them.

Allows setting a category for the customer to differentiate potential from the new users in order to provide additional benefits quickly.

Allows the admin to manage the number of handymen by accessing their profile and check how many service orders handled in real-time.

Allows the admin to carefully check the documents shared by a handyman to ensure the skill players in

services

This option used to add the category of the handyman based on the qualification and experience in the service field.

Digitally access all the payment collection by a handyman and keep the records in a secure database for future access.

While the new service requests initiated, this option allows the admin to alert the handyman in order to map them with the customers.

For every service completion, the commission is directly deducted from the service payment and maintains the record also.

By the deep analysis of the customer reviews, the admin can select the top-handyman for rewards and additional benefits by this option.

Aggregating the number of pest control experts to improve the accessibility from the customer side in order to ensure a pest-free home.

Streamline the booking ways of the locksmith by making the connection between the locksmiths with users in a simplified and digitized form.

Bring the massage therapists directly to your home through the immediate search/locating options to get-rid of stressful work schedules.

Page: SpotnRides: UberEats Clone, UberEats Clone App, UberEats Clone Script

Launch your food delivery business with this super ready UberEats clone script that can
literally be used out-of-the-box.

LET US MOVE FORWARD WITH YOUR BUSINESS PLAN

UberEats is a big business. They've spent years building the mobile app.

Don't let the scale of the app become an obstacle. With our UberEats clone app you can
launch your full-fledged delivery business within days. No need to hire an expensive team of
mobile app developers and spend months on designing, developing and debugging a
complex food
delivery app.

Works like a framework with full customization and branding.

Extremely fast and agile deployment.

Full customization support and post-deployment maintenance.

Built by a team that develops enterprise solutions.

UberEats clone app is available for Android and iOS.

Control your entire business with a dedicated admin panel.

Individual dashboard for individual users.

You can add unlimited restaurants and unlimited users.

The UberEats clone app script works like any other state-of-the-art food
ordering app works. It provides you all the possible functions and extensions that you need
to run a thriving food ordering and food delivery business. Here is a typical workflow.

Restaurants and deliverers can either register by themselves or you can
add them manually. Customers can registered simply by OTP.

Users can search by restaurant, cuisine or food category. They can
even search for food within restaurant or through a menu.

Once they have found what they are looking for, they can immediately place the order.

Users can make payments in multiple ways including debit and credit cards, net banking, UPI or digital wallet.

The restaurant gets the order alert. The user receives a notification immediately when the order is accepted.

The restaurant notifies the deliverer with the order details. The deliverer accepts the assignment.

The deliverer picks the order from the restaurant.

The user can track the movement of the deliverer on the map inside the UberEats clone app.

The order is delivered at the doorstep of the user.

User host the review about the entire service with this option.

The app script can automatically find the nearby food joints and restaurants based on user location.

Appealing listings with a smattering of mouthwatering images and text descriptions.

Users can save and use multiple addresses for food delivery.

Users can decide whether they want to pick up the food or get it delivered.

Users can use coupon codes to enjoy discounts offered by restaurant owners.

Users can view their food order moving on the live map that is updated by the second.

Multiple payment modes using credit and debit cards, digital wallets, net

banking or cash on delivery.

Users can make reservations before visiting the restaurant from within
the UberEats clone script app.

Delivery partners can highlight their current status for better
scheduling.

They can receive real-time notifications in their areas for better time
and schedule management.

Users can save and use multiple addresses for food delivery.

Delivery partners can call customers and restaurants from within the app.

Through the dashboard, delivery partners can generate digital reports of
their earning, by date ranges.

The movement of the delivery partners can be tracked by all the
stakeholders including restaurant owners, customers and admins.

Delivery partners can request manual payment to the admin.

Delivery partners can manage their profile details from the dashboard.

From receiving the order to accepting the payments to updating customers
to dispatching and tracking, everything.

Hotel reservations can be managed from the app and tables can be kept
ready for the customers.

The preparation of the food can be minutely tracked through individual
kitchens.

The script accommodates multiple payment modes with multiple currencies.

Direct updates and notifications to customers. Direct call to customers.

Real-time redressal.

Tracking precise movements, dispatch and delivery

Reviews can be requested from the users. They can be used to improve listings

Admins can monitor and supervise reservations among individual restaurants and users.

Track awarding of coupons, use of coupons by users and commission recalculation.

Admins can decide which kitchens to include based on quality and service.

To ensure only the quality menus, admins can control the dynamics of the menus uploaded by individual restaurants.

The various features that are available to users, delivery services and restaurants can be managed by the admin.

Categories – creation, approval and updating – can be left to the users and can also be manually managed.

Admins can manage biased reviews and make other adjustments that may harm the business if not made.

Review the feedback and allocate/disallow privileges accordingly.

Besides the food delivery business, SpotnRides extends its applicability to the following business models:

Maintain digital invoices that are automatically generated. Unlimited invoices.

Manage a referral program and create more and diverse revenue streams.

Track commission from different restaurants based on regions.

Improve the performance of your UberEats clone script app by carefully analyzing user behaviour.

Broadcast timely notifications to restaurant owners, delivery agents and users; automated & manual.

Deter delivery partners from taking unnecessary roads and keep them on track and supervised.

Provide support and resolve issues using integrated chat feature available in the UberEats clone script app.

Delegate duties to sub-admins and efficiently run your food delivery business.

A perfect UberEats clone app is waiting here for your good launch.

Enter your business details and discuss them with our expert team now.

It is a script that needs to be customized and deployed partially onto the server and then the main installation file on the app store such as Apple's App Store and Google Play. It is a collection of files arranged hierarchical folders. You can either get the entire collection of scripts from us and do the changes yourself, or our developers can help you customize and brand the app.

Knowing a little bit of programming definitely helps. It makes you independent and you don't need to depend on developers. Nonetheless, we have exclusively developed the script so that people who don't know how to program can also use it and grow their businesses upon it. This is our primary work model. We want to provide the script to a wide range of startups and entrepreneurs without them having to learn anything new except for their original business, in this case, food delivery through multiple restaurants, hotels and eating joints.

Besides, knowing how to program doesn't mean that one may also have the knowledge of the scripting language used in this particular UberEats clone app script.

Depends on your business model and the scale of the business that you want to run. The

UberEats clone script app is a mobile app that is complete in itself. It can run on its own without you having to incorporate any changes. But, if you run it as it is, it won't be representing your business. Hence, some level of customization will be required. How much customization is required, depends on your preferences and the way you want to define your business. Having said that, a decent deployment may take anywhere between 1-2 weeks.

There is no need. We have our own team of developers – people who have actually developed this entire clone script. Nobody knows the script better than they do. They are the best people to help you customize the app. Of course, nothing stops you from hiring your own programmers but our advice would be, your money would be better spent if you work with our development team.

Yes, users will be able to make payments using multiple payment modes such as credit cards, debit cards, net banking as well as digital wallets. Cash on delivery options will also be there.

When people order food from your app they will make payments. These payments will be redirected to the food joints, restaurants and hotels they select for ordering their food items. Before directing the payment, a small portion of the payment as a commission, will be added to your account. This is one way. You can also run promotional

campaigns such as allowing hotels and restaurants to put up banners on your home screen or enjoy priority listing by paying you a sum.

Yes, once you have purchased it, the script completely belongs to you.

If you have the budget, the expertise and the wherewithal, then sure, go ahead. The

UberEats app clone script is for those entrepreneurs who don't want to reinvent the

wheel and want to get on with business as soon as possible, and as efficiently as possible. This clone script contains everything that a typical food ordering app has, and a lot more. In fact, our UberEats app clone script has more features than the original UberEats app, simply because it is developed to cater to a wider audience.

Being a clone script doesn't make it any less of an app. It is just that, it is a

ready-made framework that can be adjusted to make it into a fully functional business app as if it has been developed from scratch. Hence, an app that would otherwise take a year to build, can be built and deployed within a week.
