We assist large businesses with custom native and cross-platform development.

SMB-focused product development prioritizes user-friendly interfaces, efficient strategy for quick market entry.

For startups, quick market entry through iterative product development is key.

Hyperlocal delivery means delivering items to customers within a small area, like a neighbourhood or city, really quickly. It's about getting things to people fast, often within just a few hours, so they can have what they need right away.

Appscrip enhances hyperlocal delivery by optimizing routes, enabling real-time tracking, facilitating smooth communication, and streamlining operations, resulting in on-time deliveries, better customer experiences, and

improved operational efficiency.

The cost of developing a hyperlocal delivery software fluctuates between 15,000 USD to 75,000 USD for custom development and even beyond that which also depends on the technology used to build it, features, and customizations. However, for clone app development it might vary from 8-16,000 USD.

Typically, building a platform like this takes about 8-9 months. However, with Appscrip's pre-built software, which you can customise, you can go live much faster, usually within 45 to 60 days.

Appscrip offers a wide range of prebuilt solutions spanning various industries such as eCommerce, transportation management systems, healthcare, social media, dating, and more.

Yes, you will have 100% ownership of the product's intellectual property (IP) once the entire payment cycle is completed. Furthermore, you have the option to get full ownership earlier as well by making an early payment for the entire amount.

We assist large businesses with custom native and cross-platform development.

SMB-focused product development prioritizes user-friendly interfaces, efficient strategy for quick market entry.

For startups, quick market entry through iterative product development is key.

To choose a telehealth app development company or telehealth app developers, consider the following factors: The expenses associated with developing a telehealth app can vary significantly, ranging from $30,000 to $250,000 or more, depending on factors such as complexity, features, and team composition. A simple telemedicine app might cost between $40,000 and $55,000, while a highly intricate custom telemedicine app with an extensive feature set could range from $90,000 to $200,000. These cost estimates take into account factors like feature quantity, chosen technology stack, and hourly development rates. By engaging Appscrip's top telehealth app developers, you can launch a premier app in the market, complete with modules for doctor, patient, lab tests, and medicine delivery, solidifying our reputation as a leading telehealth app developer.

A telehealth application is a digital platform that allows healthcare providers to deliver medical services remotely using features such as video conferencing and secure messaging. It aims to improve patient access to care, reduce healthcare costs, and enhance patient outcomes. Hire our best telehealth app developers to launch with the best product in the market.

Telehealth apps can be monetized through various strategies, including:

These strategies can be combined to create a robust monetization plan that maximizes revenue while providing a valuable service to users. Hire our best telehealth app developer to launch with the best product in the market.

IoT Platform

Optimize IoT operations with the best SaaS IoT Platform

Device management, data collection, processing and visualization foryour IOT solution with a full multi tenant SAAS architecture in 2024.

Table of Contents

Boost your IoT platform with AI for a future proof SaaS IoT solution

Optimize your IoT platform with our feature-rich solution: seamless protocol support, device management,

data visualization, security, scalability, and user-friendly controls.

Enables connectivity via industry standard MQTT & HTTP protocols and supports both cloud and on-premise deployment.

Create different devices, uniquely id them and assign

them to customer accounts.

Collect and store telemetry data in a secure & fault tolerant way and visualize data in flexible dashboards.

Transform and normalize your device data, raise alarms on incoming telemetry events, attribute updates, device in-activity and user actions.

NGINX reverse proxy for security, load balancing and termination of of TLS and DTLS connections. Security at every layer.

System built using Elixir and Golang it is fast and supports robust execution and has a small footprint.

System is highly customizable and can be extended to support more devices and integrate into different external systems.

Modern micro-service architecture with easy to maintain services with option to deploy in multiple regions.

Identity & Access Management architected via Keycloak to support advanced RBAC for IoT.

Fully functional control panel built with Flutter

Web that can run as a web based and a

desktop application.

Apps for iOS and Android built using flutter for end users to manage their devices and billing.

The Appscrip IoT platform provides production ready server infrastructure to connect your smart meter devices, collect, store and analyze smart metering data, and share results of the analysis with your customers and end-users.

Location data is streamed though message queues into a time series DB like Influx DB

and also into Apache Pinot.

Queries are written on Apache

Pinot to build dashboards.

Alarms are programed using

queries on top of Apache Pinot.

Alarms like speed limit hit, vehicle

out of allowed zone are shown

in real time on a dashboard.

Devices are mapped to a vehicle

and vehicles are live tracked on

a map in real time.

End users can track their devices

in real time on their mobile

application

Incorporates various sensors, actuators, and devices (e.g., Arduino, Raspberry Pi, ESP32/ESP8266)

for data collection and interaction with the physical environment.

Isometrik IoT Core offers comprehensive tools for device management, data collection, analysis,

and seamless integration with other systems.

Employs edge gateways, servers, and analytics, alongside Docker and Kubernetes for edge containerization and orchestration, ensuring low latency, reduced bandwidth, and enhanced privacy.

Supports MQTT, HTTP/HTTPS, and AMQP for efficient device-to-device and device-to-backend communication.

Leverages databases (SQL and NoSQL), data lakes, stream processing, and data analytics technologies for efficient storage, processing, and analysis of IoT-generated data.

Implements robust security measures including authentication, encryption (TLS/SSL), access control policies, intrusion detection/prevention systems, and secure coding practices to safeguard IoT deployments.

Facilitates monitoring, control, and data visualization through tools like Apache Superset, Grafana, and versatile UI platforms including Flutter for web, mobile (iOS/Android), and desktop applications.

Integrates TensorFlow and PyTorch for advanced analytics, enabling predictive maintenance, anomaly detection, and optimization of IoT operations.

Utilizes Docker, Kubernetes, and CI/CD tools (e.g., Bitbucket pipelines, Circle CI) for efficient deployment, scalability, and continuous integration/continuous deployment. Implements monitoring and logging solutions like Prometheus and Grafana.

Strives to comply with regulations such as GDPR, HIPAA, ISO/IEC 27001, NIST Cybersecurity Framework, and industry-specific standards to ensure regulatory compliance and data security.

Our IoT platform utilizes a comprehensive tech stack tailored for seamless device management, data analysis, and integration with backend systems. Here's an overview:

VaidG has been designed to satisfy the needs of healthcare professionals and people looking for their services.

Healthcare startups can personalize this uber for doctors / on demand healthcare app similar to Teladoc, Babylon Health, Amwell, MDLive, Practo, Zocdoc, as a standalone app or combine it with their existing models.

Healthcare apps are imperative in this digital age as it helps patients receive healthcare benefits at their

convenience. The healthcare industry also profits as they can now attend more clients especially during this COVID period.

The primary use of mobile applications in healthcare is to inform patients and healthcare professionals about preventive healthcare measures, treatment support, tracking the progress being made and assisting in clinical trials.

We record all Telemedicine appointments and store them for future reference.

End to end encryption of all patient data.

Chat is end to end encrypted.

Pre appointment survey to gather more info on patient's symptoms for better diagnosis.

Userscan book remote consultations available on the appwith a specialistthrough video calling facility for themselves or a dependents.Interactions are encrypted and stored for future reference. Doctor – Patient confidentiality is maintained whereby the data can be viewed only by the doctor or patient (not even by the App).

JUMP TO – TELEMEDICINE APPOINTMENTS

Patients can book clinical appointments with a specialist available based on various filters. In depth information can be viewed to help narrow down your choice, such as location, specializations, reviews, rating, charges, etc. The appointment can be fixed for at an available time slot and payment done through diverse options including insurance.

Clients can book a preferred healthcare service directly from their mobiles. The user has to key in all necessary details and opt for a Doctor to visit them to provide healthcare services in the comfort of their homes. Patients can also track the doctor as he makes his way for the scheduled visit.

We understand that doctors usually have easy access to their PC while working rather than a mobile device. Hence we have provided an option for doctors to fix appointments with patients from their PC itself.

With VaidG our customizable Doctor Appointment App you can fix an appointment with a Doctor or call a Doctor home or conduct tele-appointment with a healthcare professional in the Uber for Doctors app.

With VaidG our customizable Doctor Appointment App you can fix an appointment with a Doctor or call a Doctor home or conduct tele-appointment with a healthcare professional.

Schedule an appointment with a specialist and then narrow down based on diverse options provided on the doctor appointment app. Add a note providing more information.

Schedule the appointment either for yourself or for a dependent easily.

Add dependents to your account and fill all necessary details in the on demand healthcare app.

Advanced filtering features have been included in the uber for doctors app for doctor appointment based on various factors that ensures an intuitive user experience.

Provide necessary details of ailments from the drop down and add notes too.

Give all necessary information on symptoms and add images.

Choose a healthcare professional using filtering option on the on-demand healthcare app in reference to your requirements.

A list of doctors is provided to help narrow down your choice to book a consultation.

Detailed profiles of doctors are available with info such as certifications, specialization, reviews, ratings, fees, etc.

Users can book an appointment for a consultation with their preferred doctor as per availability indicated in the time slots.

The prescription and invoice raised by the doctor after the consultation can be viewed by the patient.

Users can save their favorite doctors on their profile for easy access while booking an appointment in the uber for doctors app.

The doctor graphical flow begins with doctors having to sign up on the app with all necessary information. The doctor can go online anytime and accept appointments or decline them.

A Doctor has to sign up on the app by providing all requisite info such as location, specialization, education, experience, picture, certifications, fees, etc. The app owner can accept or reject any profile.

The doctor can accept or decline an appointment (clinical visit, home visit or telemedicine). To help him take the decision the app provides information on date, time, location, symptoms, payment, treatment, etc.

When the doctor is online, appointments are routed to them which they can accept or decline. The doctor can check out their schedule for each day comprising of home visits, clinical appointments or telemedicine calls.

When a doctor begins a home visit appointment he endorses it in the app. Each stage is endorsed such as On The Way, Arrived, Appointment Started, Appointment Completed. After this the doctor creates the prescription and the invoice.

Our Best app for doctor appointment app empowers healthcare professionals to provide efficient services. Various modes of communication & payment modes are available in the on demand healthcare app.

Various modes of payment are available with options such as cash, from the wallet or from insurance.

Chat with Doctors and share information via media attachments such as pictures, scans, and prescriptions.

Conduct a telemedicine consultation along with your doctor using live video facility available on the App which is recorded and stored as per law. The data is encrypted to be viewed only by the doctor or patient.

Track your Doctor while he arrives for the appointment. This is useful for both the doctor and the patient so that no delay ensues.

Check all past, present and open consultations details that transpired with your healthcare professional and invoices.

Receipt for consultation amount paid can be viewed and then rate your experience on various factors.

Manage various on-demand healthcare providers registering on your Uber for Doctors App – Accept or reject as necessary.

View Telemedicine consultation recordings after they are completed which is an important security feature.

Setup and manage promotion codes and referral campaigns on your customized on demand platform.

View all healthcare consultations being placed in real-time.

Complete financial accounting system to keep track of earnings for various healthcare professionals registered on the app.

Payroll management system integrated in our software, to manage cash & card earning of healthcare providers with direct payment to their accounts.

Manage various on demand doctor categories present on your customised application.

View all appointments & consultations in real-time on a map across cities or zones.

Create pre-appointment questions for various symptoms

Send push notifications to healthcare professionals and customers directly from the app regarding updates.

Keep a tab on the healthcare providers and maintain high quality standards using ratings and reviews of customers.

Setup the app commission for various healthcare professionals.

All our products can be scaled vertically and horizontally. All the backend components can be dockerized and clustered. Our products are built to support 100's of thousands of users. A good solid server infrastructure as shown below is a good example of a configuration built for scale.

We are deeply inspired by the popular apps we create CLONE PRODUCTS off but we by no means acquire any source code from any of these awesome companies and products.

We have taken strong and definitive steps to ensure we don't step any legal boundaries with any other popular product. We use the word CLONE mostly as a marketing trick and we in NO WAY reverse engineer any app to make our products. All our products have been built ground up in the company.

We have also taken steps to ensure we add unique flavors into the product to guarantee they stand out in the market-place. We have also ensured we put in unique UI elements so that it does not look exactly the same as any other popular product.

Most secure app infrastructure in the market where security extends from the mobile app to the API's.

At the time of writing this page we have no RESELLERS of our products. We also don't allow any of our customers to re-sell the product once they acquire it from us. We do share the source code of the product with our customers but we provide them with a perpetual license which is bound by a contract that we sign when we are issued a purchase order. There is no license key in our software products but the legal contract that we sign prohibits our customers from re-selling our source code to any one else.

We built Appscrip.com with a mission to accelerate your journey to become an entrepreneur. Every entrepreneur's dream is to be acquired for multi million dollars and therefore we in no way prohibit you from selling your company to anybody else. The perpetual license will be transferred to the company that acquires your company and the same rules from point (4) will apply to that company as well.

We sign NDA with our clients to ensure we don't disclose their idea to anybody else. We usually have a

product road map and all our products have a rate card that details what features we have on them and what are coming out soon. Anything outside that list can be protected with an NDA that we readily agree to sign. Therefore, your idea is perfectly safe with us.

We provide free patches for bugs on our core products for a year after purchase. These patches are supplied via GIT pushes to your source code repository. We however don't do the actual code merge etc for you as that would cost us man hours.

We have paid support plans available. We know our apps best so for most of our customers it makes a lot of sense to hire our team for support. We have different support packages available depending on the SLA required (Service Level Agreements).

Logically thinking if you do buy our app and you want to customize it, there is no better team than ours to do it for you since we have developed all the underlying base code.

We have the biggest range of pre-built business applications in the market that cover several business models. We built all these products with the sole aim of reducing time to market and cost to market for our customers.

On average it costs over $100,000 to build most of these products that we have, so using them as a base to build your customized business idea will definitely bring your costs and time down significantly.

Most custom software development companies pitch you a full project plan to develop a product from scratch, a process that might take months and cost you pot loads of money, where-as we pull something out from our repotriotire, customize it and voila we have you a product in let's say 60 days

In case you do have an idea that is not similar to any of our pre-built products we can surely develop something totally custom, from scratch for you. We will try to re-use some of the micro-services and reusable software components to do some rapid application development.

We have done this successfully for large corporations who have raised multi million dollars in venture capital funds. Our team comes with a strong technical expertise in a broad range of technologies that cover:

The major costs involved for running applications of such nature are as follows:

Medicine Delivery Apps: Prescribing Benefits In Healthcare

Augmented Reality In Healthcare | Visualizing Health Benefits

Changing Modes of Treatment | Uber for Healthcare

Quick Contact

1. All site content (text and multimedia) will be the sole responsibility of the client to provide to Appscrip. Such should be provided prior to commencing the work.

2. The client is solely responsible to take proper backup of all content on their site/application prior to letting Appscrip undertake the required course of action towards meeting the contract. Any loss or damage to existing

data shall not be the responsibility of Appscrip under any circumstances.

3. The Contract does not hold Appscrip responsible for any data entry, web hosting or custom artwork/graphics related work/tasks unless otherwise specifically mentioned, paid for and agreed to by both the parties towards such. Any artwork, images, or text supplied and/or designed by Appscrip on behalf of the client, will remain the property of Appscrip and/or its suppliers unless otherwise agreed.

4. While Appscrip will do its best to achieve all deliveries within the estimated time, there may, at times, be a need to extend or adjust time in cases of any unavoidable and non-forecasted situations like those of deployment issues, dependencies, 3rd-Party support, development bottlenecks, resource unavailability due to emergency, communication delays and the like.

5. Appscrip will provide the Client an opportunity to review the given delivery project (Website and Mobile Apps)once we are completed. Appscrip shall wait for a period of 7 days to hear any feedback on such shared work/outputs from the client. If the client does not reply within this period, such material will be deemed to have been automatically accepted and approved by the Client.

6. The Client retains the copyright to data, files and graphic logos provided by the Client and grants Appscrip the rights to publish and use such material. The Client must obtain permission and rights to use any information or files that are copyrighted by a third party. The Client is further responsible for granting Appscrip permission and rights for use of the same and agrees to indemnify and hold harmless Appscrip from any and all claims resulting from the Client's negligence or inability to obtain proper copyright permissions. A contract for Application development/or design shall be regarded as a guarantee by the Client to Appscrip that all such permissions and authorities have been obtained. Evidence of permissions and authorities may be requested.

7. Appscrip will not accept responsibility for any alterations made by the Client or a third party to the Client's pages/website/mobile application once installed/ deployed. Such alterations include, but are not limited to additions, modifications or deletions.

1. Any additional features not envisaged in the scope of work of the original contract would be entertained

through a Change Management process and be additionally billed.

2. Most tweaks and minor changes/re-work are normally may normally be complied with, however, if in Appscrip's estimation, this is being abused, a list of such works will be compiled being the grounds of abuse and such re-works/tweaks shall be billed additionally per the total time efforts involved and undertaken to achieve the work/tasks at business rates which may be determined by Appscrip.

3. The client must pay the fee charged by Appscrip towards any such add-ons/re-works without any deductions, discounts or debt settlement by the agreed due date. Payments

4. Appscrip accepts payments by Cheque, Cash or Bank Transfers (right to decline payment in any of the mentioned forms without notice is reserved). The client will be required to submit a transaction receipt and swift code for the Bank Transfers to aid payment tracking with the bank.

5. In the event that a client cancels the service prior to completion of the project, they may be liable to pay a cancellation fee The fee will be commensurate to the amount of work completed at the point of cancellation. A non-payment of this cancellation fee and/or overdue amount will result in legal action against the client.

1. Appscrip will put its best efforts to deliver the products within the agreed timeframe., However dates of delivery are liable to be revised due to inevitable technical reasons. The client is solely responsible to review the product upon its delivery and update feedback within 7 days. If during this period, no response from the client within this period, the project will be deemed to have been confirmed and accepted by the client.

1. Any 3rd-Party support, product and/or service being used/ integrated into the application which requires licensing, payment, copyright, etc. shall be the sole responsibility and liability of and be provided by the client or will be procured by Appscrip on behalf of the client on pre-payment for the cost of such procurement.

2. The fee charged by Appscrip is exclusive of out-of-pocket expenses and expense claims filed by third party products/services involved.

3. No guarantees or warranties shall be provided by Appscrip regarding the accuracy, performance or quality of such 3rd-Party product/service.

4. Any upgrade in the 3rd-Party product/service being used in the project shall not be part

1. Appscrip will employ reasonable skill, care and diligence in providing the contracted service. However, no representation or warranty, express or implied, as to the availability, quality, accuracy, timeliness, completeness, performance or fitness of the service shall be deemed to be made by Appscrip.

2. Appscrip hereby excludes itself, its Employees and or Agents from: all and any liability for loss or damage caused by any inaccuracy; omission; delay or error, whether the result of negligence or other cause in the production of the mobile application; All and any liability for loss or damage to clients' artwork/photos, data/content supplied for the site. This is whether the loss or damage results from negligence or otherwise.

3. Except in the event of death or personal injury caused by our negligent acts or omissions, we shall not be liable in any way for any damages arising in contract, tort or otherwise in respect of loss or damage arising out of or in connection with this Agreement or operation of the Service. In no event will we be liable for any direct, indirect or consequential damages in contract or tort, including loss of profit, loss or damage to property or relating to claims made by third parties.

4. Appscrip cannot make guarantees of service on behalf of third-party organisations and will not be held liable for the failure in any service provided by third parties.

1. If a court finds any provision of this Agreement/ terms of service invalid or unenforceable, the remainder of this Agreement/terms of service shall be interpreted so as best to effect the intent of the parties. Either party may renegotiate the terms affected by the severance.

2. Such invalid, illegal or unenforceable provision shall be replaced by a mutually acceptable valid, legal and enforceable provision, which comes closest to the intention of the parties underlying the invalid, illegal or unenforceable provision.

1. The terms of this agreement and the rights of the parties hereto shall be governed exclusively by the laws of India, without regarding its conflict of law provisions.

2. The parties irrevocably agree that the courts of India shall have exclusive jurisdiction to settle any dispute which may arise out of, under, or in connection with these Terms and Conditions. The placing of an order will confirm acceptance of these conditions which are attached to the Order.

Roadyo, our all-in-one super app, stands as one of our premier Appscrip products, supporting multiple business models.

Are you considering building an app like Amazon, Etsy, OfferUp, or Alibaba? We have made it super easy for

you to launch your Ecommerce Platform is less time

Our ride-sharing platform lets you start an on-demand taxi booking app like Uber

Create solutions like TikTok, BigoLive, Instagram, TikTok Shop with our social media stack for iOS & Android. Our solutions are built to scale and have

Customize our pre-built media content subscription platform to build your own app like patreon, cameo or onlyfans. The creator marketplace supports

Solutions to power the 10-minute delivery economy that has become a rage in 2024.

Our people connector stack lets you create digital experiences to help improve how people discover each other and after discovery how they can communicate with each other.

We have a plug-and-play solution to enable chat and audio / video call experiences in your app.

Customize our media subscription platform, evolving it into a dynamic service marketplace with on-demand offerings, remote consultations, and tailored professional features.

A powerful SAAS stack built for the patient care space that help you jump-start the development of the next modern health care solution.

Our full-featured transportation stack that supports the following business models

Appscrip's IoT stack will help you build out your software stack to power your IoT hardware. Has built in support for

Setup a workshop with our CEO or one of our product thinkers to help match your requirements to one of our many mobile & web templates.

Work with our app conjurers to add or remove features from one of our mobile or web template to come up with your own custom product

our sales team comes up with an estimate for your custom needs along with a payment plan for the entire product.

We offer a flexible payment plan for the pre-existing templates to reduce your upfront cost and a milestone payment plan for your custom requirements if any.

We start customizing the app template that fits best and develop custom code on top of the current code base.

We set up your template, facilitating testing, add custom features progressively, allowing you to test each as built.

Once you have confirmed that all your features are tailored to your needs, we help you release your product to the internet or app stores.

After building and deploying, if issues arise or users report problems, we'll promptly assist. This is the utmost priority in custom builds.

Talk to an expert

I'm thoroughly pleased with the job they did. They are highly competent, capable and by far will exceed their expectations. They ensure the communication and app development is seamless and an easy process.

Marvin Walker

Founder, Day Runner

With Rahul, it was just amazing, he really got the concept of the app. They think of things that I even thought of to make my app better. Anybody who chooses them will have just as great of experience as I have.

Alison Koenig

Founder, SalesPADDOCK

Overall, a pleasure experience. Pay a little first, and pay a little during the development of the app as milestones are achieved, which made me feel very confident and comfortable.

Planning to start an online dating business? Use Datum. Our dating software has been crafted keeping features from apps like Tinder, Grindr, OkCupid etc in mind with few additions of our own. Kickstart your dating app & business with our customizable online dating script – Datum.

Users can swipe and connect with random online users through live video calls

Users can engage in hour-long speed-dating events, connecting with multiple potential matches in 5-minute

calls

Users can increase visibility with profile boosting for better viewership

Users have to answer certain questions for better matching and filtering

Users can set up a date with matched users at a proposed location, audio call date or a video call date

Users can boost trust and authenticity by posting videos on their profiles

All users are required to undergo face verification, ensuring authenticity and preventing fake accounts

Users can send coins as gifts to matches and prospects, along with personalized notes

Enable effortless and streamline interactions with our integrated chat engine, enhancing user engagement.

Users can exchange virtual gifts using coins, with the app earning a commission per gift sent.

Users can message potential matches before matching by spending coins. The app earns a commission from these interactions

Your app earns commission through in-app advertisements by third-party vendors. The commission can be set on the number of clicks or products purchased via referrals.

Users can subscribe to Paid plans and enjoy more features like Advanced filters, 100 matches a day, video profile, paid posts and more

Our dating software has been inspired by Tinder & other Tinder-like apps. The entire browsing to matching process is made simple with the 'Swipe & Match' functionality, and our own unique features to improve user experience on the online dating software platform.

Users can either log in with their facebook id, email id or via their phone number

Users have to answer several questions when they sign up on the app for better matching and filtering

A card view displaying potential matches is presented, enabling users to swipe left or right according to their preferences

Users can swipe to find online matches based on their preferences and connect to users in real-time over Video Call

Users have an option to call their connections, where first 30 seconds is free and the rest can be extended by spending some coins/money.

Users can login as a couple to connect with their preferred singles or other couples on the platform

Users can use coins to message prospects they haven't matched with on the platform

Users can enhance trust and authenticity by posting personal videos on their profiles, fostering a stronger connection

Users can arrange dates with matched individuals, proposing in-person, audio call, or video call options for interaction

By utilizing profile boosting, users can enhance their visibility and attract better viewership to their profiles

The app's face verification SDK guarantees no fake accounts, requiring users to verify their profiles.

Users can engage in hour-long speed-dating events, connecting with multiple potential matches

Users can swipe to find online matches based on their preferences and connect to users in real-time over Video Call

Users have an option to call their connections, where first 30 seconds is free and the rest can be extended by spending some coins/money.

Users can follow and be followed, with a full-screen social feed showcasing content from followed users and popular profiles

Users can explore a personalized match feed based on their preferences and interests

Users have the option to schedule video or in-person dates to meet potential partners

Users can manage transactions and payments conveniently with an integrated wallet system

Users can boost their profile visibility to stand out and attract more potential matches

Users can chat and exchange messages with their matches

Users can unlock premium features such as advanced filters, 100 daily matches and more.

Datum would not be best dating software for your online dating business if not for the UI features & in-app monetization features. We are constantly innovating with new monetization strategies to enable our dating script owners to efficiently utilize in-app microtransactions.

Send coins as gifts to matches and prospects, accompanied by personalized notes, to create meaningful connections

Users can utilize coins to connect with non-matched prospects, where a percentage of the amount benefits the recipient and the remaining portion supports the platform admin

Boost your wallet with in-app coin purchases and unlock a world of exciting features by spending your coins wisely.

Convert coins to cash, withdraw funds securely via trusted payment gateways with our wallet feature

Users can explore a personalized match feed based on their preferences and interests

Users have the option to schedule video or in-person dates to meet potential partners

Users can manage transactions and payments conveniently with an integrated wallet system

Users can boost their profile visibility to stand out and attract more potential matches

Users can chat and exchange messages with their matches

User can initiate voice or video calls to engage with their matches

Datum would not be best dating software for your online dating business if not for the UI features & in-app monetization features. We are constantly innovating with new monetization strategies to enable our dating script owners to efficiently utilize in-app microtransactions.

Convert coins to cash, withdraw funds securely via trusted payment gateways with our wallet feature

Track, monitor, manage, and review all matches with comprehensive insights on the interactions among the users

Effortlessly manage and log match activities, unmatches, and match initiators with detailed timestamps

Automated content moderation which seamlessly detects and eliminates inappropriate content

Enhance app safety by thoroughly analysing reported users and content, including reporting sources and

reasons

Manage user activities and maintain an overview of all users within a centralised dashboard

Track and analyze user earnings, coin statements, app earnings, and other wallet data in the dedicated financials tab

Efficiently handle cash withdrawals in a dedicated tab, providing transparent withdrawal details.

Admins have the authority to introduce and personalise new profile attributes within the app

Brand Color integrationOur dating software can be modified to integrate your brand colors, keeping it consistent throughout.

Server SetupWe host the solution software on the client's server making it a hassle-free process of transition

Our pre-built customizable modules for various industries speed up your go-to-market timeline and give you a competitive edge

Our extensive industry experience and satisfied global clients testify to our benchmark-setting, robust applications

We provide stable, scalable products with reliable maintenance and support, continuously enhancing our offerings for seamless customer experiences.

All our products can be scaled vertically and horizontally. All the backend components can be dockerized and clustered. Our products are built to support 100's of thousands of users. A good solid server infrastructure as shown below is a good example of a configuration built for scale.

We are deeply inspired by the popular apps we create CLONE PRODUCTS off but we by no means acquire any source code from any of these awesome companies and products.

We have taken strong and definitive steps to ensure we don't step any legal boundaries with any other popular product. We use the word CLONE mostly as a marketing trick and we in NO WAY reverse engineer any app to make our products. All our products have been built ground up in the company.

We have also taken steps to ensure we add unique flavors into the product to guarantee they stand out in the market-place. We have also ensured we put in unique UI elements so that it does not look exactly the same as any other popular product.

Most secure app infrastructure in the market where security extends from the mobile app to the API's.

At the time of writing this page we have no RESELLERS of our products. We also don't allow any of our customers to re-sell the product once they acquire it from us. We do share the source code of the product with our customers but we provide them with a perpetual license which is bound by a contract that we sign when we are issued a purchase order. There is no license key in our software products but the legal contract that we sign prohibits our customers from re-selling our source code to any one else.

We built Appscrip.com with a mission to accelerate your journey to become an entrepreneur. Every entrepreneur's dream is to be acquired for multi million dollars and therefore we in no way prohibit you from selling your company to anybody else. The perpetual license will be transferred to the company that acquires your company and the same rules from point (4) will apply to that company as well.

We sign NDA with our clients to ensure we don't disclose their idea to anybody else. We usually have a product road map and all our products have a rate card that details what features we have on them and what are coming out soon. Anything outside that list can be protected with an NDA that we readily agree to sign. Therefore, your idea is perfectly safe with us.

We provide free patches for bugs on our core products for a year after purchase. These patches are supplied via GIT pushes to your source code repository. We however don't do the actual code merge etc for you as that would cost us man hours.

We have paid support plans available. We know our apps best so for most of our customers it makes a lot of sense to hire our team for support. We have different support packages available depending on the SLA required (Service Level Agreements).

Logically thinking if you do buy our app and you want to customize it, there is no better team than ours to do

it for you since we have developed all the underlying base code.

We have the biggest range of pre-built business applications in the market that cover several business models.

We built all these products with the sole aim of reducing time to market and cost to market for our customers.

On average it costs over $100,000 to build most of these products that we have, so using them as a base to build your customized business idea will definitely bring your costs and time down significantly.

Most custom software development companies pitch you a full project plan to develop a product from scratch, a process that might take months and cost you pot loads of money, where-as we pull something out from our repotriotire, customize it and voila we have you a product in let's say 60 days

In case you do have an idea that is not similar to any of our pre-built products we can surely develop something totally custom, from scratch for you. We will try to re-use some of the micro-services and reusable software components to do some rapid application development.

We have done this successfully for large corporations who have raised multi million dollars in venture capital funds. Our team comes with a strong technical expertise in a broad range of technologies that cover:

The major costs involved for running applications of such nature are as follows:

How The Best Towing Software Work?

Rise of Uber for trucks like apps

FAQ's

Earning varies with location, normally an owner makes in a range of $25,000 – $40,000 per year. A roadside assistance technician's salary varies from $11/hr to $14/hr.

HONK, AAA and Urgent.ly, Strand(India), Morni(Saudi Arabia) are the most popular roadside assistance apps globally.

Roadside assistance business is basically helping a traveler who for some reasons is in trouble and needs assistance that can be of various types. For example, suppose you are traveling on a road in your car and suddenly your car's tire gets inflated. This is where a roadside assistant will come and help you and in return he will charge you a certain amount. In the present times, the business of roadside assistance has taken a new surge and has become an area of investment from curious investors.

Customer Care Service

Mobile Vehicle – A mobile vehicle can be any van or similar vehicle that can accommodate two people and the equipment required for use.

It would be advisable that you have more than one vehicle so that if two people call for help at the same time you can assist both in the same time. This will help you in catering better services.

Equipment and Tools

Servicing Machines

Towing Vehicle

Mechanic and Manpower

The cost to develop an Uber-like tow-truck booking app varies in regions. In the US, developers will charge anywhere between $50 and $200 per hour, while it would be between $20 and $100 per hour in Europe. Meanwhile, developers in India will charge about $10-$30 per hour for a similar app with all the features mentioned above.

Therefore, a rough estimate for developing a tow-truck booking application for a single platform, either Android or iOS, can cost between $10,000 and $20,000. And for developing a cross-platform application, you may need to shell out up to $45,000.

We sign NDA with our clients to ensure we don't disclose their idea to anybody else. In the field of taxi booking app

development, Appscrip leads with

innovative features for EV adoption,

including carbon point calculation

and charging station integration.

In the post-pandemic era of 2024, shared rides surge, fostering community and savings. Appscrip's taxi app enables drivers to make multiple stops, boosting earnings and rider benefits.

Drivers can opt for monthly ride app subscriptions, avoiding high commissions from platforms like Uber and Lyft, potentially encouraging local app development.

In 2024, Appscrip's innovations in taxi booking app development transform driver management via AI for tracking, fraud detection, and efficient matching.

Collaborating with corporations and hospitality boosts fleet owners' revenue. Appscrip integrates a corporate module for employees and guests to book rides, enhancing convenience.

Appscrip's taxi app integrates dash cams streaming to servers. AI monitors live feeds for safety, reassuring customers.

They can share live streams with family or friends for added security during trips.

The ride-share module within our Super

App offers more than just rides. Similar

to industry leaders like Uber, Grab, Gojek,

Glovo, and Careem.

Appscrip's taxi app offers customization,

integrating with third-party apps via API

for efficient user acquisition through

additional distribution channels.

Appscrip integrates open-source mapping technologies for path plotting, distance matrix,

ETA estimation, and reverse geocoding. Our use of the Google API is exclusively for place

searches, reducing Google Maps expenses for you.

Users can book instantly or schedule rides.The app prioritizes matching with the users favorite driver for a

personalized travel experience.

Users have the flexibility to book car rental packages for varying durations, ranging from hourly, daily,

weekly, to monthly, within the taxi booking app.

Appscrip's taxi booking app multiple payment options where users can pay through cash, app wallet or card.

Customers/Users can book a ride for friends and family through the taxi booking app.

Customers can click on the SOS button to alert dispatchers of an emergency. Dispatcher can then track the trip

and take appropriate action.

Users have an option to choose from

multiple options of vehicle listed in the

taxi booking app.

Upon trip completion, users receive a detailed

invoice with an accurate fare estimate based

on ride time, distance, and stops, ensuring

transparency and clarity in billing.

Users can book more than one trip at the

same time through the app.

Users can specify special pickup requests,

such as curbside pickup or assistance for

disabilities, directly within the taxi booking

app for the driver's awareness.

Users/customers can add and also pay from

their corporate accounts.

Users can rate and review the driver the driver

after the ride and can also add them to favorites

for future rides.

Users can earn points in every ride and

can use the loyalty points to get discounts

and offers on the invoice as well.

Users can monitor real-time ETA for both

pickup and drop-off, enabling them to stay

informed about ride completion timings

accurately.

Users can raise a ticket during the ride or

after the ride to report any issue during

the trip.

Users also have an option to cancel trips after

booking it.

Users can apply for promo codes before

the ride or during the trip to get discounts

and offers.

Users can track the real time location

of the driver through the app.

Customers can effortlessly contact

drivers within the app for special

requests or ETA clarification.

Users can book instantly or schedule rides.The

app prioritizes matching with the users favorite

driver for a personalized travel experience.

Appscrip's taxi booking app multiple payment

options where users can pay through cash,

app wallet or card.

Users have the flexibility to book car rental

packages for varying durations, ranging

from hourly, daily, weekly, to monthly, within

the taxi booking app.

Users can apply for promo codes before

the ride or during the trip to get discounts

and offers.

Users can monitor real-time ETA for both

pickup and drop-off, enabling them to stay

informed about ride completion timings

accurately.

Customers can click on the SOS button to

alert dispatchers of an emergency.

Dispatcher can then track the trip and take

appropriate action.

Users have an option to choose from

multiple options of vehicle listed in the

taxi booking app.

Users can track the real time location

of the driver through the app.

Customers can effortlessly contact

drivers within the app for special

requests or ETA clarification.

Users can specify special pickup requests,

such as curbside pickup or assistance for

disabilities, directly within the taxi booking

app for the driver's awareness.

Users/customers can add and also pay from

their corporate accounts.

Users can book more than one trip at the

same time through the app.

Users can raise a ticket during the ride or

after the ride to report any issue during

the trip.

Users can rate and review the driver the driver

after the ride and can also add them to favorites

for future rides.

Upon trip completion, users receive a detailed

invoice with an accurate fare estimate based

on ride time, distance, and stops, ensuring

transparency and clarity in billing.

Customers/Users can book a ride for friends and family through the taxi booking app.

Users can earn points in every ride and

can use the loyalty points to get discounts

and offers on the invoice as well.

Users also have an option to cancel trips after

booking it.

Drivers can accept and reject new trip requests.

Drivers can go online and offline through the app

which will let the control center know about their

availability.

Drivers can provide real-time updates to customers

regarding their location during pickup or throughout

the trip.

Driver can navigate the route of the trip easily

using integrated google map or waze.

Drivers can seamlessly manage trip routes with

dynamic price adjustments for multiple stops with

automatic updates.

After the ride concludes, the driver can view the

auto-generated invoice, ensuring clarity on the

ride.

The driver app features a dashboard where drivers and riders can monitor their performance, total number of rides, and earnings.

Drivers can link their bank accounts to receive payments directly from both ride fares and business transactions.

Drivers can easily onboard themself on the app and become a partner by signing in and submitting their details.

Drivers can end their trip for the day by finding/taking trips that are closest to their home location.

Drivers can end their trip for the day by finding/taking trips that are closest to their home location.

Drivers have the option to take rides which were not booked through the app and set it as meter booking.

Drivers can easily call customers through the app.

Driver can easily message customers from the app.

Driver can easily message customers from the app

Surge Zones visible on Driver app

Users have the flexibility to request multiple drop-offs during a single pickup, with the option to add additional stops even after the trip has commenced.

Vehicles with drivers can be rented for packages with limits of X hrs and Y kms / miles.

Interface for corporates to add employees and users can link their employee account to their

app account to pay for trips. Trips can be booked
only for regions approved by the corporation.

Platform supports scheduling trips and the
automated dispatch takes care of finding the
driver to complete the trip.

Setup surge pricing for zones and for selected
vehicle types. Prices can surge up / down.

Users have the convenience to book and pay for
rides for friends and family, with the added benefit
of receiving a ride tracking link via both text
message and email.

Real time tracking of drivers on a map with
ETA to pickup & drop.

Admins can customize fees for airport or station
pickups/drop-offs and implement associated
taxes.

Admin can set up zones where the service does
not operate.

Admin can setup special pickup points for

locations like the airport or malls where

multiple gates exist so users can pin-point

the exact pickup for the drivers.

Users have the option to conveniently add funds

to their wallet, seamlessly integrated with the app

for effortless payments.

Users can select from multiple payment methods

like credit / debit cards, cash, loyalty points and

cash wallet.

Users can apply promo codes to get discounts.

These can be applied before start or during a

live trip.

In locations like airports the automated dispatch

assigns trips to drivers who entered the zone first

(FIFO dispatch).

We have Implemented open-source mapping for reverse geocoding, route optimization, ETA, &

distance calculation, reducing dependence on Google Maps.

The platform optimizes routes to minimize driver

deadhead time for pickups, maximizing billable

miles.

The dispatcher has the option to assign trip requests

to drivers who are close to completing their current

trip if no available drivers are free.

If this feature is enabled, automated dispatch will

attempt to find trips that are closest to the driver's

preferred home location.

Drivers can be given incentives based on their

performance which is based on KPIs like

acceptance rate, average rating, duty time,

total earnings.

Driver earning reports are auto generated and drivers

can be paid out directly from the platform.

Fleet owners have a terminal to manage their drivers

and vehicles. They can add their fleet to take up

bookings on the platform.

Driver & vehicle documents can be managed from

the admin and system suspends and alerts when

any essential transportation document expires.

Fares can be set up per city per vehicle type and takes into account waiting time , distance travelled and travel time.

If the customer has pending dues the system ads these dues to the next trip booked.

Customers can rate and review drivers at the end of the trip, these KPI's are key to manage driver incentives and performance.

System generates a unique 4 digit code that the customer needs to share with the driver before the driver can start the trip , this ensures the right driver is picking up the customer.

These fees are applied if a customer cancels the trip before or after the driver is assigned. Fees vary depending on when the trip was cancelled.

When a user requests say for a Sedan which has no online driver , the system can dispatch the trip to a SUV and bill the same as that for a sedan.

Some vehicles can be set to be shown as available

in 2 vehicle types at the same time.

Users can select if they need a male/female driver,

vehicle with wheelchair support etc.

Drivers can track their earnings and performance

on a weekly basis directly on their driver dashboard

page.

A loyalty program can be configured for users

based on their spend or the number of trips they

do in a specific duration.

A referral program can be configured for users

whereby users get a set credit into their cash wallet.

Users can book multiple trips at the same time on

the same login.

Users can instant message drivers directly from

within the app.

Integrated with twilio or similar services to provide

app to phone calling, so the recipient never sees

the phone number of the caller.

Users and drivers can chat with each other directly

using internet calling over WebRTC.

Drivers can pickup customers on the kerb and start

a trip from their driver app.

This helps drivers plan their location better to

improve their chances to pickup a trip.

Customizable

100% source code ownership

Faster go-to-market

Easy payment option

Setup a workshop with our CEO or one of our product thinkers to help match your requirements to one of our many mobile & web templates.

our sales team comes up with an estimate for your custom needs along with a payment plan for the entire product.

We offer a flexible payment plan for the pre-existing templates to reduce your upfront cost and a milestone payment plan for your custom requirements if any.

We start customizing the app template that fits best and develop custom code on top of the current code base.

We set up your template, facilitating testing, add custom features progressively, allowing you to test each as built.

After building and deploying, if issues arise or users report problems, we'll promptly assist. This is the utmost

priority in custom builds.

All our products can be scaled vertically and horizontally. All the backend components can be dockerized andclustered. Our products are built to support 100's of thousands of users. A good solid server infrastructure as shown below is a good example of a configuration built for scale.

Our subscription-based creator marketplace solution is perfect to build an app like onlyfans

Setup a workshop with our CEO or one of our product thinkers to help match your requirements to one of our many mobile & web templates.

We offer a flexible payment plan for the pre-existing templates to reduce your upfront cost and a milestone payment plan for your custom requirements if any.

We start customizing the app template that fits best and develop custom code on top of the current code base.

After building and deploying, if issues arise or users report problems, we'll promptly assist. This is the utmost priority in custom builds.

We assist large businesses with custom native and cross-platform development.

SMB-focused product development prioritizes user-friendly interfaces, efficient strategy for quick market entry.

For startups, quick market entry through iterative product development is key.

Various factors influence the cost of developing a social media app:

Integrating these aspects seamlessly can often incur substantial expenses. Hence, opting for a pre-built solution is advisable. An Instagram clone app, for instance, can be a cost-effective alternative, offering ample room for customization and future upgrades. One should choose a really good social media app development company to do so and launch a successful application.

Absolutely! The app is built by the best social media app development company and is fully customizable,

allowing you to incorporate various innovative monetization strategies. For instance, users have the option to send virtual coins and gifts to content creators. These coins can then be converted into real currency and withdrawn from the in-app wallet.

The cost of developing a Social Media app fluctuates between 15,000 USD to 75,000 USD for custom development from a social media app development company. However, for clone app development it might vary from 8-16,000 USD.

Appscrip offers a wide range of prebuilt solutions spanning various industries such as eCommerce, transportation management systems, healthcare, social media, dating, and more.

Appscrip provides a suite of pre-built IPs tailored for diverse industries. These solutions are customizable to your specific requirements, effectively cutting down your time to market.

Yes, you will have 100% ownership of the product's intellectual property (IP) once the entire payment cycle is completed. Furthermore, you have the option to get full ownership earlier as well by making an early payment for the entire amount and we are one of the most flexible social media app development company.

We being the best social media app development company offer multiple customizations from our side and we are open to any changes from our customer's side.a) Hassle-free product rebranding with your logo and company nameb) Seamless integration of your brand colours for a consistent look and feelc) Server setup on your own infrastructure for easy transitiond) Expert assistance in app publishing, selling, and distributione) Effortless and secure transactions through popular payment gateways: Stripe, Razorpay, and Kushki

Appscrip stands tall and proud with each reviews clip sent to us, It is a constant reminder that we are on the right track – Delivering high quality native mobile apps that are tailored to each customer's business needs.

Our Appscrip Reviews page features creative appreneurs with amazing ideas. We preserve the authenticity of their idea while building it on strong native scripts and finally delivering a product that truly feels unique and special to each client.

Marvin got us to develop his application Dayrunner which was built on top of our Uber for Trucks app – Truckr! We continue to support Marvin after a successful launch for his future updates and releases.

"I'm thoroughly pleased with the job you did" "Highly competent, capable and by far will exceed your expectations" "Seamless and Easy process"

Marvin WalkerFounder, DayRunner

HunnyBee was built using our tinder app clone – Datum. Andrew approached us with his idea for a vegan dating app, understanding his passion behind the app we were able to tailor make his app purely for the benefit of vegan lovers out there.

"Overall pleasurable experience" "Pay a little first and Pay a little during the development of the app as milestones are achieved, which made me feel very confident and comfortable" "Seamless and Easy process"

ANDREWFounder, HunnyBee

Alison wanted to create an app for buying and selling horses. Intrigued by the idea we developed her app using our Airbnb clone – Getbnb. But we didn't just stop there, we understood her business model and created an app that could handle her current needs and her future business requirements.

"With Rahul, it was just amazing, he really got the concept of the app" "They think of things that I haven't even thought off to make my app better" "Anybody who chooses them will have just as great of experience as I have"

Alison KoenigFounder, SalesPADDOCK

The CarpeDiem Network was an app idea Daniele wanted to make to spread inspiration from people to people via photo posts. Using our Instagram clone – Picoadda, We delivered an ios app that would serve as a source of inspiration for people all over.

"Fast, Professional and customer oriented" "I want to thank the appscrip team and warmly recommend this company" "You guys are GREAT".

Daniele VFounder, CarpeDiem

Our uber clone app- Roadyo (Now Karry), immediately got Kenshell's attention as she wanted to make a

rideshare company that offers competitive rates along with professional and upbeat service through a mobile app. Working closely with her we were able to deliver an app tailored to the features she wanted to introduce to her customers.

"They have awesome customer service" "I wouldn't recommend going to anyone else" "All of you guys are awesome" "Definitely love the way appscrip works".

Kenshell JonesFounder, Flex

Earning his confidence and trust in our services since 2012, Mark Shlake and team Appscrip have worked on a variety of museum and club mobile apps. Using our experience in building apps for various industries, He remains to be a valued customer till date.

"Been working with appscrip for a number of years now with a variety of different apps" "They have my recommendation" "They are a great team"

Mark ShlakeFounder, TheMagicHouse

Truth approached us develop a transportation app built on our on-demand taxi script. Happy clients make our teams deliver even better and strive for further excellence.

"They made my dream come alive, I look forward to working with them again"

Truth Egbele JuniorFounder, Jetride

Quick Contact

Mobile technology is disrupting industry value chains across verticals. We have been perfecting our value proposition for the past 8 years to power the technology supporting your business ideas by building robust, scalable apps. Think you have a good idea? Get in touch with us and we will bring it to life.

A serial entrepreneur, with Appscrip being his 5th techventure, Rahul just loves "starting"up. If you have an

idea and need a tech partner, just send him a holler!

Our support ninja , manages all our live chat communications and also leads quality assurance for various products in Appscrip. You can reach her at

We take pride in the dedication and the efforts put by our team for your business. We also treat the Appscrip team back with the same respect. Keeping a fine balance between work life and leisure, you can always be assured that our team would be at their full mental and physical capacity to accelerate your business.

In simple words – We power mobile first business models. We have built 14 mobile apps which are live in various industry verticals and are doing excellent in terms of business, revenue and technology. Currently we are working on 6 more.We have created the backend technology (PreBuilt IP) that helps us build custom experiences while ensuring that we are not spending our energy in reinventing the wheel with every platform.Pre built IP is structured in the form of backend and front end code blocks. These code blocks power modules are built for different business models. These modules are evolving with each successful implementation as we uncover different use cases.Updates to the Prebuilt IP don't impact any previous implementations. The code blocks become part of your solution in an un-bundled format and are completely accessible for further customizations. In addition they still need some amount of work to ensure we are not compromising with the specifics of your business model.

At the end of our engagement cycle you are allowed to receive, customize and retain the complete source code. Appscrip grants to the Client a perpetual, non-exclusive, worldwide, non-transferable, royalty-free license to use its Pre-Existing IPs solely for Deliverables. The only right we retain is to reuse the Prebuilt IP for other implementations.

We help you take your idea from Point A – Idea/high level business model to Point B – a market ready technology solution. You get a head start at Point A starting from our PrebuiltIP. We keep adding value at each stage based on our experience of what works and what doesn't, helping you avoid some mistakes, thus increasing the probability of getting many things right in the first version itself.Other than that the engagement closely follows the standard SDLC. We have a matured communication system that has evolved over more 5

years with a PM being a singular point of contact and using industry standard tools for every stage. (Read Redmine, Invision, Salesforce Cases, etc.).

We take the privacy and IP that is associated with your business model really seriously. That doesn't imply we don't learn from each new implementation. But these learnings are centered around how we can make the base IP more generic and robust. Other than that a Chinese wall exists between different projects/teams restricting the flow of information even if we have multiple projects undergoing in the same domain.While we do entertain requests for accepting non-competes in certain cases wherein the specific business model/vertical under discussion is unique enough to warrant ignoring future business opportunities. But in a lot of other cases it's difficult for us to ignore the future business altogether. For some verticals it's synonymous to suggesting a company that just does chat apps, to not make chat apps for anyone else.In addition, the fact that the front end is developed completely from scratch from designs made specifically for you helps in securing the uniqueness. Most of the new engagements to begin with are fixed time/cost arrangements wherein we agree to deliver an agreed upon scope in a given timeframe.After many iterations over the previous few years the model that works best in our experience is an hybrid of waterfall and agile.Under this approach the first half of the engagement concentrates on zeroing in on the specs that go with the high level business model and simultaneously working on the wireframes and designs. The second half is dedicated to bi-weekly sprints involving coding certain parts and high level User Acceptance Testing. The final round of regression testing is reserved for when we already have thrown significant number of these sprints out of the park. The entire process is designed for feedback wherein you as a key stakeholder are constantly impacting the different aspects. In addition this ensures we are not constantly at each other's necks fighting scope creep.Once we have delivered on the initial promises most of the engagements go on a retainer wherein we closely follow the Agile methodology in true spirit.

We have a rich tech stack, choosing the most appropriate fit for various domains/usecases and we ensure to keep our stack updated as per emerging markets standards and cutting edge technologies.The applications, both native and web communicates with our backend using SOAP api requests over Https, secured by

ssl/tls.Android apps are written primarily in java with newer development being done in Kotlin.Ios apps are predemoninantly written in swift.Flutter and react are the main technologies powering our webapps. Flutter and React are the main technologies powering our cross-platform apps.CMS systems are a mix of php and angular.We use mix of sql, nosql, key-value pairs and graph databases ranging from mysql,postgresql,mssql,citusdb to mongodb,cassandra,elasticsearch,neo4j and redis to name a few.Programming languages used to expose the business logic in form of apis are nodejs,python,golang,php,elixir,javascript and typescript among others.Selenium is used for the automation testing of our products.MQTT is the protocol powering the realtime exchange of messages in our platforms.Kafka and rabbitmq are the primaring queuing systems used.Application backend is developed using microservices architecture and gRPC is used for communication between the microservices.Apache spark and flink powers our realtime analytics engine.Deployment is done using docker containers either on cloud providers like aws(autoscale groups),GCP,Digital ocean etc, over kubernetes cluster or on google cloud run.Circle CI is used for continous integration and deployment.Some of the development frameworks used are- Hapijs,Django,Phoenix,Laravel etc.Videocalls are powered by opensource janus/jitsi/apprtc projects or commercial service providers like agora,hyperrtc,twilio,vonage etc.Trello is used for bug tracking and organizing projects.Jira is used for project management.Cloudfront, Cloudflare and cloudinary are some of the CDNs used for content delivery.Godaddy or cloudflare are the primary DNS resolution providers used.Websites are mostly written in wordpress or react.Mix of payment gateways are used like stripe,braintree,payfort to name a few.Emails are sent using sendgrid or mailgun, while twilio is primarily used for OTP services among others.Realtime notifications in apps works over FCM(firebase) or OneSignal.For cloud storage eiterh google storage or aws s3 is used.Live streaming uses ant-media.

The costs are calculated at our hourly rates for different resources, which are significantly lower than On-shore developers, since our development team sits out of India. In addition in our experience it takes us 40% less time to develop the complete solution than what it would have taken, if we were to develop everything from

scratch.The methodology is fixed cost based wherein costs for any overruns with regards to features decided in the agreement are borne by us. The entire cost itself is divided into 4 milestones of 25% each tied to different physical milestones.

The fact that there are so many moving parts on our products , makes the technology complex and time consuming to develop. We might be dealing with more than 1 app for a project on multiple platforms and web based versions in addition to CRM/Dashboard/Admin panel components to be developed on top of the backend that gels everything together. The fact that front end is developed natively (to optimize user experience) for each of these components , customization takes time and effort.

1. Faster time to market2. Lower cost3. Complete flexibility viz. a viz. owning technology and all the data without being responsible for licensing costs.But the biggest factor that sets us apart is We understand how mobile apps are built for a business. Today we are more thought leaders in this space that comes from experience doing diverse implementations in on-demand , messaging , social and dating and shopping space.

Recurring payments to the 3rd party service providers

As we provide software that is downloadable in nature, we follow a strict refund policy. Kindly read through our Refund Policy for understanding your part as a customer who purchases item from the site. Refund is NOT provided once when the products are sent and the order is accomplished. In few exceptional circumstances the refund is possible depending upon the nature of the product.

Cases when a customer is eligible for Refund are:

We provide free support in terms of bug fixes for 30 days from the Go Live date i.e the day the mobile applications are live on the Google Play Store and Appstore. Post this, a customer can opt for our monthly and yearly support packages.

Start your own On-demand laundry business using our Uber for laundry , Uber for Dry Cleaners , Laundrapp Clone , Washio Clone , Rinse Clone , ZipJet Clone . Using state of the art technologies like web sockets from Pubnub , MongoDB , Stripe for adaptive payments, Mailgun API for transactional emails , Twilio for SMS services , Amazon SNS for advanced Push services it provides a very scalable platform for your business to scale on.

The app is completely PCI compliant so you are assured of no legal issues with regards to payment processing. All credit card information is stored on the payment gateway's server.

The Laundrapp Source Code , Washio Source Code , Rinse Source Code , ZipJet Source Code comes with 2 mobile applications ,1 for the customers to book services and 1 for the providers to accept and manage bookings.

The Uber for laundry / Uber for dry cleaning source code uses a hybrid database architecture, MySQL and MonogDB. MongoDB (NoSQL) ensures that the app can manage large volume of data which is normally associated with real time applications and guarantees web scale.

Uber for Laundry

We are deeply inspired by the popular apps we create CLONE PRODUCTS off but we by no means acquire any source code from any of these awesome companies and products.

We have taken strong and definitive steps to ensure we don't step any legal boundaries with any other popular product. We use the word CLONE mostly as a marketing trick and we in NO WAY reverse engineer any app to make our products. All our products have been built ground up in the company.

We have also taken steps to ensure we add unique flavors into the product to guarantee they stand out in the market-place. We have also ensured we put in unique UI elements so that it does not look exactly the same as any other popular product.

Most secure app infrastructure in the market where security extends from the mobile app to the API's.

At the time of writing this page we have no RESELLERS of our products. We also don't allow any of our customers to re-sell the product once they acquire it from us. We do share the source code of the product with our customers but we provide them with a perpetual license which is bound by a contract that we sign when we are issued a purchase order. There is no license key in our software products but the legal contract that we sign prohibits our customers from re-selling our source code to any one else.

We built Appscrip.com with a mission to accelerate your journey to become an entrepreneur. Every entrepreneur's dream is to be acquired for multi million dollars and therefore we in no way prohibit you from selling your company to anybody else. The perpetual license will be transferred to the company that acquires your company and the same rules from point (4) will apply to that company as well.

We sign NDA with our clients to ensure we don't disclose their idea to anybody else. We usually have a product road map and all our products have a rate card that details what features we have on them and what are coming out soon. Anything outside that list can be protected with an NDA that we readily agree to sign.

Therefore, your idea is perfectly safe with us.

We provide free patches for bugs on our core products for a year after purchase. These patches are supplied via GIT pushes to your source code repository. We however don't do the actual code merge etc for you as that would cost us man hours.

We have paid support plans available. We know our apps best so for most of our customers it makes a lot of sense to hire our team for support. We have different support packages available depending on the SLA required (Service Level Agreements).

Logically thinking if you do buy our app and you want to customize it, there is no better team than ours to do it for you since we have developed all the underlying base code.

We have the biggest range of pre-built business applications in the market that cover several business models. We built all these products with the sole aim of reducing time to market and cost to market for our customers.

On average it costs over $100,000 to build most of these products that we have, so using them as a base to build your customized business idea will definitely bring your costs and time down significantly.

Most custom software development companies pitch you a full project plan to develop a product from scratch, a process that might take months and cost you pot loads of money, where-as we pull something out from our repotriotire, customize it and voila we have you a product in let's say 60 days

In case you do have an idea that is not similar to any of our pre-built products we can surely develop something totally custom, from scratch for you. We will try to re-use some of the micro-services and reusable software components to do some rapid application development.

We have done this successfully for large corporations who have raised multi million dollars in venture capital funds. Our team comes with a strong technical expertise in a broad range of technologies that cover:

The major costs involved for running applications of such nature are as follows:

Uber for laundry: On-Demand Laundry Business Model

Laundry Software That Add Brightness

Home Cleaning Services | Businesses & Opportunities Aplenty!

A multivendor ecommerce marketplace solution is a software platform that allows multiple vendors to sell their products or services on a single website. It provides tools for managing vendors, products, orders, and

payments.

Yes, most multivendor ecommerce marketplace solutions offer customization options for the look and feel of your marketplace. You can usually change the layout, colors, fonts, and other design elements to match your brand.

The type and level of customer support included with a multivendor ecommerce marketplace solution can vary. Some solutions offer 24/7 support, while others have limited hours. Most solutions provide support through email, phone, or live chat.

Some benefits of using a multivendor ecommerce marketplace solution include:

Increased product variety and selectionReduced costs and risks associated with traditional retailAccess to a larger customer baseStreamlined order management and fulfillmentGreater scalability and potential for growth.

With our Postmates clone- Roadyo, let your customers attain timely service with the best food delivery software and increase client retention rate through improved order allocation time. Roadyo gives you a comprehensive platform that enables you to receive orders from your customers through a customizable mobile app under your brand's name reducing the burden of receiving orders through other channels.

About Postmates

From failed business to running a company with more than 800 employees, Postmates has unlocked access to every local merchant in the cities for the customers. Postmates offers a leading on-demand delivery marketplace for customers to find and purchase from local restaurants and stores across 4,200 US cities.

It has grown to become one of the country's most popular delivery companies since it was founded in 2011 in San Francisco. Uber acquired the startup for $2.65 billion after raising more than $903 million in capital. It has received a funding of $681.5 million (as of August 2019) and is valued at $1.85 billion.

eGrocery is expected to be one of the fastest growing sectors reaching USD 84460 million by 2024.

Our Food Delivery module is at the core of the Postmates clone script and our best selling script.

Alcohol delivery is here to stay; as COVID-19 has forever shifted consumer behavior.

By setting up an online convenience store, you can continue providing essential supplies.

The Global e-pharmacy market is expected to grow 17 per cent y-o-y to $244 billion in 2027.

Our in-house team consisting of designer, developers and testers have the ability to understand and meet your requirements. Our Postmates clone script is designed to meet the unique needs of restaurants with a simple, intuitive and cost-effective solution.

Grocery Delivery Features In The Postmates Clone App

Online grocery shopping is catching up with consumers rapidly. According to Orian Research, the global online grocery market would grow at a CAGR of 23.7% in the period of 2020-2025. Another research suggests that the grocery ecommerce business is expected to reach $250 billion in the next 5 years.

Our module is inspired by the big players in the category: Instacart, BigBasket, Shipt, Tesco, Peapod & Walmart.It can also be tailored for Quick commerce deliveries.

Medicine Delivery Features In The Postmates Clone App

In the time of COVID-19, the medicine delivery app development has emerged as the biggest support mechanism. Our Postmates clone is designed for online purchases of medications at any time and anywhere.

Provide a one-stop solution for customers to purchase medicines online. Build a full inventory of medicines,

fitness products, personal care and health care with facility for prescription based products too.

Food Delivery Features In The Postmates Clone App

We have taken the most engaging and profitable business features from top food delivery apps like Postmates, Zomato, Doordash, Uber Eats and more to build you just the right solution to propel your food delivery business to dizzying heights. Crafted by expert developers and designers who are trained in the art of developing food delivery apps.

Liquor Delivery Features In The Postmates Clone App

It's a wise business move to start an online alcohol delivery business with US online alcohol sales reaching $2.6 billion in 2019, and the US consuming more wine than any other country in the world since 2014.

A report from Allied Market Research states that the value of the global alcoholic beverage market is expected to reach $1,684 billion by 2025 from $1,439 billion in 2017, which implies a CAGR of 2%.

Convenience Store Features In The Postmates Clone App

By setting up an online convenience store, you can continue providing essential supplies to the general public while keeping your business going. Ideally, you can grow it even bigger than before the Coronavirus pandemic by reaching a larger audience beyond your local area.

Ride-booking feature is similar to Uber and Lyft. It also helps in growing the initial user base.

Worries over hygiene & crowd have led people to shun conventional meat and fish markets.

It is no longer dominated by B2C. B2B eCommerce sales are predicted to grow to $6.6 trillion this year.

A perfect solution for all tow truck needs. The industry is expected to reach USD 8000 million by 2024.

To help professional truckers find truck loads, post their truck availability to move more truck freight.

Expected to grow 10-15x in the next 5 years to become a USD 5 billion opportunity by 2025.

Payment GatewayWe ensure hassle-free transactions in the app through Stripe, Razorpay & Kushki

DoorDash Businesss Model Secrets Revealed

Food Delivery Business Model | Cooking Up Profits

How Does Postmates Work After Uber Postmates Merger?

1: Finding or creating the need. This is the first step of how does Postmates make money. With great on demand app development company like Appinventiv, applications are created for businesses to track the needs of the customers.

2: Payments are made at the time of order. The delivery fee is added to the total bill depending on the distance between the pick up and drop off points and the final result shows how much does Postmates costs.

3: The third step is matching. What is Postmates fleet responsible for? Once the order is placed by a user, the notification along with the details of the product is sent to the messenger close to the shop. The details are properly matched by the messenger while buying the product so that they get exactly what the user has demanded. The order must be bought and delivered at the doorstep of the user within one hour.

4: Another excellent feature of Postmates is that the users can track where the messengers are with their products. The users also have the option to send feedback after the completion of orders. There is another option for users to tip the delivery guys which totally depends on the users. This is one of the ways how does Postmates make money for its delivery persons.

*FeesThe bulk of Postmates' revenue stems from the fees it collects for every order facilitated through its platform.First and foremost, the company collects a percentage of the product's sale price. The percentage is dependent upon the types of goods sold and the agreement made with the partner.

*Second, Postmates makes money via delivery fees that have to be paid to ship the item. Postmates' delivery fee is $0.99–$3.99 for Partner Merchants and $5.99–$9.99 for all other merchants. The delivery revenue is then shared with the driver, who gets paid based on a variety of metrics such as delivery speed, pickup time, ratings, and so forth.

* Third, Postmates applies a so-called service fee. The service fee, which is percentage-based, shall compensate the company and its drivers for additional tasks conducted during the delivery, such as picking up groceries from supermarket shelves.

* Fourth, Postmates collects a small cart fee, which applies when an order does not hit the minimum threshold (which varies by location). The small cart fee is $1.99 per order.

Lastly, customers who terminate their orders have to pay a cancellation fee. The fee varies depending on how far the order is along, the merchant, order volume, and more.

When Postmates applies its Blitz Pricing feature, its income from the above fees may therefore be elevated.

*Unlimited: Premium subscription that allows customers to save money on deliveries. In exchange for paying $9.99 per month (or $99.99 annually), customers will receive the following benefits:

Free delivery on every order above $12Exclusive access to Postmates events and giveawaysNo blitz pricing at peak hoursSpecial offers just for membersPostmates claims that Unlimited subscribers save an average of $185 per year. Just two monthly orders would already cover the cost of membership.

Subscribers will gain access to over 600,000 restaurants and businesses that deliver on Postmates. Just like any other modern-day subscription, Unlimited can be canceled whenever needed.

Postmates is one of those rare mobile applications that has a wide network of delivery partners that deliver products to the customers within a few hours of ordering. It is an on-demand service providing company which was launched on 1 May 2011 by three founding members, Bastian Lehmann, Sean Plaice and Sam

Street. The company has its headquarters in San Francisco, California, and it serves the cities of the United States and Mexico with efficient food, grocery, and alcohol delivery services.

Postmates, an on-demand delivery unicorn raised $225 million in new capital at a $2.4 billion valuation, it announced today. The company previously filed privately to go public, making its new investment more interesting than a traditional, nine-figure late-stage round.

Doordash — the online food delivery leader in the U.S. and a pioneer of the platform-to-consumer model.Uber Eats — the most widely available service. Six continents!Just Eat — the UK food delivery leader, it is also a part of Brazilian delivery giant iFood.Grubhub — the app that controlled over 50% of U.S. online food deliveries in 2018.Postmates — the app that is under Uber Eats' control since 2019, takes 10% of U.S. online food deliveries.

The design development process can be roughly divided into three stages:

The cost of developing a food delivery app like Postmates depends on several factors.

Location of the App Develop CompanyExperience of the App DevelopersComplication of the App DesignNumber and Level of App FeaturesApp Platform You Choose (Android/iOS/Hybrid)Type of App Development: Clone or Custom App DevelopmentAll these factors could lead your food delivery app development cost anywhere from $25,000 to $100,000 or even more.

Logically thinking if you do buy our app and you want to customize it, there is no better team than ours to do it for you since we have developed all the underlying base code.

We have the biggest range of pre-built business applications in the market that cover several business models. We built all these products with the sole aim of reducing time to market and cost to market for our customers.

On average it costs over $100,000 to build most of these products that we have, so using them as a base to build your customized business idea will definitely bring your costs and time down significantly.

Most custom software development companies pitch you a full project plan to develop a product from scratch, a process that might take months and cost you pot loads of money, where-as we pull something out from our repotriotire, customize it and voila we have you a product in let's say 60 days

In case you do have an idea that is not similar to any of our pre-built products we can surely develop something totally custom, from scratch for you. We will try to re-use some of the micro-services and reusable software components to do some rapid application development.

We have done this successfully for large corporations who have raised multi million dollars in venture capital funds. Our team comes with a strong technical expertise in a broad range of technologies that cover:

The major costs involved for running applications of such nature are as follows:

Create your own custom GPT for your websites and apps, automating engagement, sales, and support through conversational AI. Enterprise grade agents with

Roadyo, our all-in-one super app, stands as one of our premier Appscrip products, supporting multiple business models.

Are you considering building an app like Amazon, Etsy, OfferUp, or Alibaba? We have made it super easy for

you to launch your Ecommerce Platform is less time

Our ride-sharing platform lets you start an on-demand taxi booking app like Uber

Create solutions like TikTok, BigoLive, Instagram, TikTok Shop with our social media stack for iOS & Android. Our solutions are built to scale and have

Customize our pre-built media content subscription platform to build your own app like patreon, cameo or onlyfans. The creator marketplace supports

Solutions to power the 10-minute delivery economy that has become a rage in 2024.

Our people connector stack lets you create digital experiences to help improve how people discover each other and after discovery how they can communicate with each other.

We have a plug-and-play solution to enable chat and audio / video call experiences in your app.

Customize our media subscription platform, evolving it into a dynamic service marketplace with on-demand offerings, remote consultations, and tailored professional features.

A powerful SAAS stack built for the patient care space that help you jump-start the development of the next modern health care solution.

Our full-featured transportation stack that supports the following business models

Appscrip's IoT stack will help you build out your software stack to power your IoT hardware. Has built in support for

Setup a workshop with our CEO or one of our product thinkers to help match your requirements to one of our many mobile & web templates.

Work with our app conjurers to add or remove features from one of our mobile or web template to come up with your own custom product

our sales team comes up with an estimate for your custom needs along with a payment plan for the entire product.

We offer a flexible payment plan for the pre-existing templates to reduce your upfront cost and a milestone payment plan for your custom requirements if any.

We start customizing the app template that fits best and develop custom code on top of the current code base.

We set up your template, facilitating testing, add custom features progressively, allowing you to test each as built.

Once you have confirmed that all your features are tailored to your needs, we help you release your product to the internet or app stores.

After building and deploying, if issues arise or users report problems, we'll promptly assist. This is the utmost priority in custom builds.

Talk to an expert

I'm thoroughly pleased with the job they did. They are highly competent, capable and by far will exceed their expectations. They ensure the communication and app development is seamless and an easy process.

Marvin Walker

Founder, Day Runner

With Rahul, it was just amazing, he really got the concept of the app. They think of things that I even thought of to make my app better. Anybody who chooses them will have just as great of experience as I have.

Alison Koenig

Founder, SalesPADDOCK

Overall, a pleasure experience. Pay a little first, and pay a little during the development of the app as milestones are achieved, which made me feel very confident and comfortable.

Our CEO talks about the rise of the TikTok like apps because of its unique business models.

An exclusive interview explaining how Rahul Sharma's (CEO, Founder) technical acumen and Shivangi Sharma's (Co-Founder) entrepreneurial skills have made Appscrip what it is today!

A befitting endorsement to hard work is recognition. To be pronounced as one among an august assembly of 2020 Growth Champions is as good as it gets.

The Economic Times in association with Statista have launched an ambitious initiative to highlight true accelerators of the Indian economy. In particular, few growth champions whose achievements are noteworthy.

To be cloistered along with giants such as Paytm, BYJU'S, Razorpay, Zomato, TVS Next, and Sankalp is an honour in itself. Over and above Appscrip being ranked #30 is the icing on the cake.

The Financial Time's ranking of 500 high-growth companies from the Asia-Pacific region couldn't have come at a more opportune moment. As it will now serve as a true indicator for readers to identify firms with the clout to survive the debacle and continue breaking barriers.

Indeed, the creative and perspicacious will stride through the crisis with innovation and will strengthen their resolve to further enhance their standing in their domains.

Appscrip is elated to find itself within the first 30% of this magnanimous assembly of the top 500 high-growth firms of the Asia-Pacific region.

Hardwork and the continuos appreciation of our clients is making us grow tall and proud. We are ranked 4th among the top mobile app development companies in Atlanta. Our Next Destination : The World!

View all shipment details and inform the customer when on the way.

Capture the recipient's signature to confirm the shipment receipt and raise the final invoice.

View your current net receivables, past settlements with details.

Intuitive dashboard that lets you to easily schedule and dispatch jobs in real time. Receive real time push notifications for new bookings.

Phone booking form allows the call center employee to create new bookings.

Get a bird's eye view of your entire fleet in real time and book a driver manually or allow the system to auto book drivers.

Track drivers and view their job schedules.

Track on going bookings.

All our products can be scaled vertically and horizontally. All the backend components can be dockerized and clustered. Our products are built to support 100's of thousands of users. A good solid server infrastructure as shown below is a good example of a configuration built for scale.

We are deeply inspired by the popular apps we create CLONE PRODUCTS off but we by no means acquire any source code from any of these awesome companies and products.

We have taken strong and definitive steps to ensure we don't step any legal boundaries with any other popular product. We use the word CLONE mostly as a marketing trick and we in NO WAY reverse engineer any app to make our products. All our products have been built ground up in the company.

We have also taken steps to ensure we add unique flavors into the product to guarantee they stand out in the market-place. We have also ensured we put in unique UI elements so that it does not look exactly the same as any other popular product.

Most secure app infrastructure in the market where security extends from the mobile app to the API's.

At the time of writing this page we have no RESELLERS of our products. We also don't allow any of our customers to re-sell the product once they acquire it from us. We do share the source code of the product with our customers but we provide them with a perpetual license which is bound by a contract that we sign when we are issued a purchase order. There is no license key in our software products but the legal contract that we sign prohibits our customers from re-selling our source code to any one else.

We built Appscrip.com with a mission to accelerate your journey to become an entrepreneur. Every entrepreneur's dream is to be acquired for multi million dollars and therefore we in no way prohibit you from selling your company to anybody else. The perpetual license will be transferred to the company that acquires your company and the same rules from point (4) will apply to that company as well.

We sign NDA with our clients to ensure we don't disclose their idea to anybody else. We usually have a product road map and all our products have a rate card that details what features we have on them and what are coming out soon. Anything outside that list can be protected with an NDA that we readily agree to sign. Therefore, your idea is perfectly safe with us.

We provide free patches for bugs on our core products for a year after purchase. These patches are supplied via GIT pushes to your source code repository. We however don't do the actual code merge etc for you as that would cost us man hours.

We have paid support plans available. We know our apps best so for most of our customers it makes a lot of sense to hire our team for support. We have different support packages available depending on the SLA required (Service Level Agreements).

Logically thinking if you do buy our app and you want to customize it, there is no better team than ours to do

it for you since we have developed all the underlying base code.

We have the biggest range of pre-built business applications in the market that cover several business models.

We built all these products with the sole aim of reducing time to market and cost to market for our customers.

On average it costs over $100,000 to build most of these products that we have, so using them as a base to build your customized business idea will definitely bring your costs and time down significantly.

Most custom software development companies pitch you a full project plan to develop a product from scratch, a process that might take months and cost you pot loads of money, where-as we pull something out from our repotriotire, customize it and voila we have you a product in let's say 60 days

In case you do have an idea that is not similar to any of our pre-built products we can surely develop something totally custom, from scratch for you. We will try to re-use some of the micro-services and reusable software components to do some rapid application development.

We have done this successfully for large corporations who have raised multi million dollars in venture capital funds. Our team comes with a strong technical expertise in a broad range of technologies that cover:

Scan The Opportunities Available For You In The Market

The app provides the option for the shippers to create LTL loads for pickup from a single location and drop to multiple

Depending on the amount of load required to be shipped, shippers may choose to book a single truck or multiple trucks

For multiple stops, the app automatically optimizes routes to make the shipment time efficient for both the carrier and the shipper

Our white-label truck booking app provides the option for the shippers to create LTL loads for pickup from a single location and drop to multiple

Depending on the amount of load required to be shipped, shippers may choose to book a single truck or multiple trucks

For multiple stops, the truck booking app automatically optimizes routes to make the shipment time efficient for both the carrier and the shipper

These are business customers who usually do bulk loads and pay using their credit line. Custom pricing can also be set as negotiated by these businesses.

Allow shippers to book a truck as per their requirements

Select commodity of goods from the list to see the best truck options for your load

Shippers can choose the packaging type for their goods and enter the specifications

Shippers can check and review the details of the load here before proceeding further

This feature allows the shipper to notify the truck booking app and the carrier to receive the payment

Shippers are allowed to choose their mode of payment from the given options

Multiple stops can be added by the shippers to load the goods in the truck and get them shipped

Review the truck details and fare breakup for the load to be shipped before confirming

Shippers can enter their budget for the shipment and the carrier may choose to accept or reject

The number of handlers needed for loading and unloading can be entered by the shippers

The shippers may choose to schedule the truck at a time convenient for them

For multiple truck selection, the shippers need to enter the exact number of trucks required for their load

Once the booking is confirmed, shippers can track the status of the truck and the load through the truck booking app itself

Shippers may choose to save the receivers' contact details in the address book within the app for a faster booking flow

Check the details and status of all the loads shipped and booked for shipment until now

Allow shippers to book a truck as per their requirements

Select commodity of goods from the list to see the best truck options for your load

Shippers can choose the packaging type for their goods and enter the specifications

Shippers can check and review the details of the load here before proceeding further

This feature allows the shipper to notify the app and the carrier to receive the payment

Shippers are allowed to choose their mode of payment from the given options

Multiple stops can be added by the shippers to load the goods in the truck and get them shipped

Review the truck details and fare breakup for the load to be shipped before confirming

Shippers can enter their budget for the shipment and the carrier may choose to accept or reject

The number of handlers needed for loading and unloading can be entered by the shippers

The shippers may choose to schedule the truck at a time convenient for them

Once the booking is confirmed, shippers can track the status of the truck and the load through the app itself

Shippers may choose to save the receivers' contact details in the address book within the app for a faster

booking flow

Check the details and status of all the loads shipped and booked for shipment until now

Carriers will get a popup in the app for every booking and they can accept or reject them

Once the carrier reaches the location to pick up the load, they can update the status in the app

Carriers can view the order details for every booking they have accepted

Carriers can view the number of stops in a booking and the details for every stop

As the loading is about to begin, the carrier can update the status to notify the shipper

Once the loading starts, a timer will start in the app to record the time taken for the loading

The carrier needs to upload the proof of pickup (image or document) in the app as soon as the loading completes

Once the carrier reaches the location to deliver the load, they can update the status in the app

As the unloading is about to begin, the carrier can update the status to notify the shipper

Once the unloading starts, a timer will start in the app to record the time taken for the unloading

The carrier needs to upload the proof of delivery (image or document) in the app as soon as the unloading completes

Carriers can track all their ongoing and completed jobs here and also view the load details for each of them

Once the carrier reaches the location to pick up the load, they can update the status in the app

Carriers can view the load details for every booking they have accepted

Carriers can view the number of stops in a booking and the details for every stop

As the loading is about to begin, the carrier can update the status to notify the shipper

Once the loading starts, a timer will start in the app to record the time taken for the loading

The carrier needs to upload the proof of pickup (image or document) in the app as soon as the loading completes

Once the carrier reaches the location to deliver the load, they can update the status in the app

As the unloading is about to begin, the carrier can update the status to notify the shipper

Once the unloading starts, a timer will start in the app to record the time taken for the unloading

The carrier needs to upload the proof of delivery (image or document) in the app as soon as the unloading completes

As soon as the proof of delivery is uploaded, the booking is completed and an automated invoice is generated

This is the overall view of the status of every booking that is ongoing, scheduled, or completed along with the details of all the available and unavailable drivers

This allows the dispatcher to create a booking on behalf of the customer and resolve any issue that might be arising at the customer's end

The dispatcher can assign or unassign bookings for carriers available for the area of a booking

The load details of any booking can be viewed in the dispatcher panel by the dispatcher whenever required

This is the overall view of the status of every booking that is ongoing, scheduled, or completed along with the details of all the available and unavailable drivers

The admin can add the contacts for any institution buyer on the admin panel under the address book section and also set a price for each one of them

Automate the generation of invoices for business accounts and they will receive the same as soon as a booking is completed.

Allow fleet operators to manage all the bookings by viewing active loads, negotiating with the shippers, assigning loads to the drivers, tracking drivers live on a map, and tracking live loads.

All analytics in our truck booking app module is powered by Apache Spark which is the best technology in the market to use for capturing and analyzing big data.

The admin may choose to customize the shipping fees for businesses based on hourly rental, mileage fee, fixed distance range fees, and custom.

Manage all truck drivers on your custom truck booking app and accept or reject drivers that register on the carrier application

Manage app update settings for all the users who have downloaded your customized truck booking app

Set up and manage fares for intracity or intercity bookings based on set parameters such as mileage, range, etc.

Manage the carrier payouts from the admin panel without any extra paperwork to make the process fast and efficient

Monitor active and completed loads from the admin panel and stay updated with the current status of each booking

Brand Color integrationOur white-label truck booking app solution can be modified to integrate your brand colors, keeping it consistent throughout.

Our white label truck booking app solution script can be customized for a variety of on demand services including freight dispatch and freight management applications. Whatever your unique business idea is, Truckr can be tailored to suit that.

With state of the art container technology, clean coding practices, use of microservices architecture while simultaneously integrating safety & security features on the white label trucking app solution - Truckr is one of the most robust truck booking app in the market today.

The white label trucking app solution & truck dispatch software is not only robust & scalable but extremely secure as well. SSL-powered APIs, Keychain, JWT, reverse proxy setup, etc. ensures that security extends all the way from the app to each individual API.

The IP rights of the customized white label trucking app solution script will be registered to your business and we will have no claim post this. The product will solely belong to your business and therefore, any modification or usability of the app will be limited to your discretion.

White label truck booking app solution is a pre-built truck booking software that is 100% customizable as per your business requirements and the UI is designed in such a way that anyone who has ever used Uber or any other cab booking app would find this extremely similar and therefore, won't find it difficult to use.

A transportation management system (TMS) is a technology-enabled platform that allows logistic businesses to optimize their supply chain resources including carrier usage, so the processes can be streamlined saving time, money, and resources.

Route optimization in a TMS is all about identifying the most efficient route for a truck to deliver the load and complete the job. Our white-label truck management system Truckr comes with an integration of Here maps that allows the shippers, carriers, and other stakeholders involved to reduce inefficiencies by constantly tracking and navigating the load through a route that's suitable for trucks and other heavy vehicles.

The TMS provides visibility of the carrier activities through analytics. This could help businesses understand the fallouts better (if any) and take important business decisions accordingly. The carrier management TMS also improves the working relationship with the carriers and ultimately resulting in increased customer satisfaction.

Fleet management is a strategic approach to optimizing the usage of carriers and minimizing deadheading for vehicles. It is mostly about making sure the businesses make money and keep growing.

On the other hand, transport management is more about getting insights and using them for better optimization of the transportation systems so the fleet management companies can run their business more efficiently and in a hassle-free manner.

Yes, our app supports multiple languages and currencies as add-on features, making it a great fit for global usage.

Yes, additional payment gateways, APIs, and other third-party services can be integrated subject to the requirements with additional charges. Please get in touch to discuss this in detail.

Truck fleet management is an approach used mostly by fleet operator companies to manage and organize the trucks for better efficiency and optimized usage of resources for every booking received.

Truckr has the most secure app infrastructure in the market where security extends from the mobile app to the APIs.

We provide free patches for bugs on our core products for a year after purchase. These patches are supplied via GIT pushes to your source code repository. We however don't do the actual code merge etc for you as that would cost us man-hours.

We have paid support plans available. We know our apps best so for most of our customers it makes a lot of sense to hire our team for support. We have different support packages available depending on the SLA required (Service Level Agreements).

Our quick commerce software can be customized for a variety of dark store applications. Whatever your unique business idea is, Qkly can be tailored to suit that.

With state of the art container technology, clean coding practices, use of microservice architecture while simultaneously integrating safety & security features on the quick commerce app – Qkly is one of the most robust quick commerce software in the market today.

Qkly, the white label quick commerce app is not only robust & scalable, but extremely secure as well. SSL-powered API's, Keychain, JWT, reverse proxy setup etc ensures that security extends all the way from the app to each individual API.

The IP rights of the customized quick commerce software will be registered to your business and we will have no claim post this. The product will solely belong to your business and therefore, any modification or usability of the app will be limited to your discretion.

Table of Contents

The food delivery software is highly advanced and incorporates

all the latest features. You can easily integrate as a service in

your super app. It includes options for browsing restaurant

menus, booking or reserving tables, scheduling deliveries,

and much more.

Integrate a package delivery module into your super app to

offer users convenient options for sending and receiving

packages. This feature allows users to track shipments,

send various types of packages, and communicate with

delivery drivers via chat and calls.

Integrate grocery delivery into your super app for added

convenience. This module enables users to order groceries

online hassle-free, track orders, and choose delivery times.

Drivers can accept or reject orders and communicate with

users through chat and messaging.

Enhance your super app with a meat delivery module

for added convenience. This will allow users to order meat

online effortlessly, track their orders, and select delivery

times. Drivers can accept or reject orders and communicate

with users via chat and messaging.

Many people are seeking online beer delivery services,

making it a promising business opportunity. Easily integrate

our liquor delivery module into your super app and seize

the market.

Integrating ride-hailing into your super app is seamless

with Appscrip. It offers essential features like multi-stop

ride booking, corporate bookings, tracking, a subscription

model, and more, ensuring a smooth experience for

both users and drivers.

Super app development with Appscrip offers the advantage

of integrating multiple modules into a single app. With

Appscrip, you can also include on-demand services,

allowing users to order services like cleaning and salon

appointments through the app.

Effortlessly integrate multi-vendor ecommerce into your

super app. The app is packed with advanced features such

as live shopping, multiple payment options, multi-vendor

carts, and more.

Our Tow Trucks software provides a robust digital platform

for vehicle transportation and efficient towing service

management. Featuring an attractive UI and exceptional

features, it supports the growth and scalability of your

tow truck business.

Integrate our doctor booking module into the super app and simplify the process of booking appointments,

online consultation and more.

Integrate our telemedicine software easily and offer quick medicine delivery and tele-health features into the

super app. The module allows users to book online appointments, tele-consult, order medicines and lab tests, schedule clinic visits, and more.

Businesses can utilize the platform's commission system to generate revenue. Any super app can earn through business commissions, customer fees, and delivery commissions directly from the app.

Businesses can generate substantial revenue by offering premium features through a subscription model, where customers pay a set fee to access exclusive services or content on the platform.

Merchants registered on the app can promote their businesses through in-app advertisements by paying a fee, which contributes directly to the app's revenue.

Our super app comes fully equipped with the latest features, providing you with complete control to customize according to your business model.

Our ready-made super app is fully customizable, with multiple add-ons that you can choose from.

You'll receive full ownership of the super app, giving you the freedom to completely optimize it to meet your needs.

With our prebuilt ip, you can accelerate your super app launch time and go live in less than 60 days.

We offer monthly payment plans to customers to acquire the pre-built app over 6-12 months. Contact us for more details.

Setup a workshop with our CEO or one of our product thinkers to help match your requirements to one of our many mobile & web templates.

Work with our app conjurers to add or remove features from one of our mobile or web template to come up with your own custom product

Our sales team comes up with an estimate for your custom needs along with a payment plan for the entire

product.

We offer a flexible payment plan for the pre-existing templates to reduce your upfront cost and a milestone payment plan for your custom requirements if any.

We start customizing the app template that fits best and develop custom code on top of the current code base.

We set up your template, facilitating testing, add custom features progressively, allowing you to test each as built.

Once you have verified all your features are built to suit, we help you release your product to the internet or to the app stores

After building and deploying, if issues arise or users report problems, we'll promptly assist. This is the utmost priority in custom builds.

Talk to an expert

I'm thoroughly pleased with the job they did. They are highly competent, capable and by far will exceed their expectations. They ensure the communication and app development is seamless and an easy process.

Marvin Walker

Founder, Day Runner

With Rahul, it was just amazing, he really got the concept of the app. They think of things that I even thought of to make my app better. Anybody who chooses them will have just as great of experience as I have.

Alison Koenig

Founder, SalesPADDOCK

Overall, a pleasure experience. Pay a little first, and pay a little during the development of the app as milestones are achieved, which made me feel very confident and comfortable.

Andrew

To manage LTL and FTL loads, supports multi pickup and multi delivery

Digitally transforms the shipper and carrier industry

Our transportation management software has a full featured truck dispatch system with mobile & web interfaces for

This is a perfect solution if you are looking to build a product like

Digital freight broker software with a digital load board that is accessible on Web, iOS and Android apps. The product comes integrated with a TMS as well to manage the trucks.

Setup a workshop with our CEO or one of our product thinkers to help match your requirements to one of our many mobile & web templates.

Work with our app conjurers to add or remove features from one of our mobile or web template to come up with your own custom product

We offer a flexible payment plan for the pre-existing templates to reduce your upfront cost and a milestone payment plan for your custom requirements if any.

We start customizing the app template that fits best and develop custom code on top of the current code base.

We set up your template, facilitating testing, add custom features progressively, allowing you to test each as built.

Once you have verified all your features are built to suit, we help you release your product to the internet or to the app stores

After building and deploying, if issues arise or users report problems, we'll promptly assist. This is the utmost priority in custom builds.

We assist large businesses with custom native and cross-platform development.

SMB-focused product development prioritizes user-friendly interfaces, efficient strategy for quick market entry.

For startups, quick market entry through iterative product development is key.

Definitely! you can choose as many services you want in your app. We'll make sure to meet all your needs on time and within your budget.
